StormwaterRx Technology Heading East

Stormwater Runoff

StormwaterRx LLC technology units are now in fabrication and will be heading east, to an auto shredding recycling facility in Virginia. Justin Lauterbach, Associate, who manages RT's *StormwaterRx* business unit, said that the recent order signifies both acceptance of the latest stormwater technology, and modular adaptability of the units to site-specific conditions.

The facility involved, outside Washington, D.C., has stormwater collection impoundments, which afford oil water separation and settling. However, more stringent stormwater standards, coming into effect in states throughout the nation, in many instances this year, dictated a need for metals treatment. After evaluation of a number of technologies and vendors, facility management selected *StormwaterRx*, stating that the line of equipment was "the best for stormwater treatment."

Mr. Lauterbach said that three *StormwaterRx* technologies will be installed:

- *Retenu™* - To provide initial reduction of solids and metals.
- *Aquip®* - To provide cost effective filtration of solids, and, enhanced metals removal.
- *Purus®* - To remove remaining concentrations of metals to meet discharge limits.

Time and time again, facilities with open yard operations are choosing *StormwaterRx* as their stormwater treatment technology of choice. The facility, in operation since 1973, is moving forward with technology which has been demonstrated over and over again, to meet discharge limits which are hard to reliably meet using other technologies.

In yet another example of *StormwaterRx* technology coming east, a *Clara* unit was selected for a new recycling yard in Montgomery County, north of Philadelphia, Pennsylvania. *Clara* is *StormwaterRx*'s most popular unit, affording cost

effective oil and grease as well as solids removal, where basic treatment is needed at any site.

RT Environmental Services, Inc. (RT) is proud to represent *StormwaterRx* technology here on the east coast, where we are currently experiencing above average wet conditions. As on the west coast, and now on the east coast, where it is not possible to place all potentially polluting materials which might impact stormwater under roof, *StormwaterRx* is receiving increased attention among those with open yard operations.
