Pursuant to the requirements of the Environmental Remediation Standards Act (Act 2), adopted August 16, 1997, which states that:

Interpretations of geologic and hydrogeologic data shall be prepared by a professional geologist licensed in this Commonwealth

I hereby attest that, as a Professional Geologist licensed in the Commonwealth of Pennsylvania, I am familiar with, and have reviewed and/or prepared the interpretations of the geology and hydrogeology presented in the attached report entitled:

Remedial Investigation Report and Cleanup Plan, dated October 2020 and updated March 9, 2021, for the former Cramp Shipyard Site, Parcels B & C, 2001 Richmond Street and 2005 Richmond Street in Philadelphia, Pennsylvania

and, based on the available data presented in the report, believe that the geologic and hydrogeologic interpretations made therein are reasonable and accurate.

Craig Herr, PG
PG-004709

1.0 SITE SUMMARY

RT Environmental Services, Inc. (RT) was retained by Dyott Corporation and Columbus Boulevard Associates to implement activities pursuant to the Pennsylvania Land Recycling and Environmental Remediation Standards Act (Act 2) at the Former Cramp Shipyard property located along Beach Street with a street address of 2001 Richmond Street (Parcel B) and 2005 Richmond Street (Parcel C), Ward 31, in Philadelphia City, Pennsylvania. This property is referred to as Parcel's "B" & "C" and is hereinafter referred to as the "Site".

The Site is a portion of the former William Cramp & Sons Ship and Engine Building Company, which operated at the Site from circa 1830 to 1964. The Site was active with piers, dry docks, and industrial manufacturing facilities. After operations ceased at the Site, all structures were demolished and several phases of filling of the former shipbuilding docks occurred as permitted by the US Army Corps of Engineers (USACE).

RT conducted both soil and groundwater investigations at the Site to identify areas which were potentially impacted due to the historical industrial use and filling of the Site. On August 3, 2018, RT submitted a Final Report for groundwater on behalf of Dyott Corporation/Columbus Boulevard Associates/Beach Street Corporation. This Final report encompassed Parcels A, B, and C (2002 Beach Street, 2001 Richmond Street, and 2005 Richmond Street) and was approved on January 18, 2019 for attainment of a residential Statewide Health Standard in groundwater (non-use aquifer).

It is the opinion of the Professional Geologist, based on the results of the soil sampling program, that none of the VOC constituents of concern present in soil are present in excess of the residential Statewide Health Standard MSCs. Arsenic, chromium, lead and mercury along with polychlorinated biphenyls (PCBs) and polycyclic aromatic hydrocarbons (PAHs) are present in site soils in excess of the residential SHS. With the implementation of the Cleanup Plan presented herein, the remediator proposes to demonstrate attainment of a combination of the statewide health and site-specific standard through pathway elimination.

The owners of the Site, Dyott Corporation and Columbus Boulevard Associates, will seek relief of cleanup liability for soil under Pennsylvania's Act 2 program. As such, soil samples were obtained across the site to adequately characterize the presence of VOCs, PAHs, PCBs, and metals in soils.

The work described in this combined Remedial Investigation Report and Cleanup Plan meets the applicable requirements of 25 PA Chapter 250 that implement Act 2. Laboratory results of the soil samples collected, analyzed and results reported herein characterize the soil media. The Cleanup Plan includes the necessary engineering/institutional controls for the Site to eliminate future direct contact to soil via ingestion and inhalation of soil particulates pathways, provides information for the protection of construction workers and outlines the evaluation for the potential vapor intrusion, specifically for PCB Area 1.

Once the requirements of the Cleanup Plan have been implemented, a Final Report will be prepared and submitted to PADEP to document attainment of a combination of Act 2 Residential Statewide Health and Site-Specific Standards for soils. The Final Report will include a Post-Remediation Care Plan to ensure the cap is properly maintained. Also, since engineering controls will be used to demonstrate attainment of a Site-Specific Standard, an Environmental Covenant will be prepared and recorded for the Site.

1.1 Report Format

This combined Remedial Investigation Report and Cleanup Plan presents the results of the Act 2 soil investigation and the strategy to achieve a residential standard through pathway elimination. Section 1.0 summarizes the results of site characterization to assess impacted soil related to historic industrial operations and filling at the Site. Section 2.0 presents a discussion of reasonably ascertainable published information regarding the geologic and topographic characteristics of the site. Section 3.0 describes the site characterization activities that were implemented to assess Site soil conditions. Section 4.0 includes a discussion of the site conceptual model for the Site that was developed based on the results of the Site characterization activities. Conclusions of the Site Characterization Investigation are presented in Section 5.0. Details of the Public Involvement Meeting are presented in Section 6.0 and Municipal and Public Notifications are outlined in Section 7.0. Principal contacts can be found in Section 8.0 and references cited in this report are included in Section 9.0.

2.0 SITE INFORMATION

To obtain information regarding the physical Site setting, RT completed a review of reasonably ascertainable published information regarding the geologic and topographic characteristics of the Site. Information reviewed included topographic and geologic maps. The Site setting is summarized in the following sections.

2.1 Site Description and History

The Site is a portion of the former Cramp Shipyard property identified as Parcels B & C, which are located at the following current address: 2001 Richmond Street (owned by Dyott Corporation) and 2005 Richmond Street (owned by Columbus Boulevard Associates) in Ward 31 in the City of Philadelphia, Pennsylvania, 19125. The Site is comprised of 15.1667 combined acres (Parcel B 13.2274 acres and Parcel C 1.9393 acres) and is bounded by North Delaware Avenue and North Beach Street to the north-northwest, Schirra Street and Parcel A to the east and the Delaware River to the south. The Site location coordinates are latitude 39°58'15.006" North and longitude 75°07'18.951" West (Parcel B) and latitude 39°58'15.034" North and longitude 75°07'18.825" West (Parcel C). A Site location map is provided as **Figure 1**. A generalized Site plan is included as **Figure 2**.

From circa 1830 to 1964, the Site was home to a portion of the William Cramp & Sons Ship and Engine Building Company. The Site was active with piers, dry docks, and industrial manufacturing facilities. These facilities were reported to use fuels, solvents, asbestos, coal, electrical transformers, and lead-based paints to support on-Site operations.

Between 1964 and 1975, the Site was owned by the Philadelphia Industrial Development Corporation. In 1975, the Philadelphia Industrial Development Corporation and Longmead Homes, Inc. owned the Site. During that time, there were several phases of filling permitted by US Army Corps of Engineers (USACE). The materials brought onto the Site were mainly sands, building debris, fly ash, bulkhead timbers, and road construction materials. Other materials were subsequently placed, including asphalt, building debris, and soil. Dyott Corporation purchased Parcel B in 2003 and Columbus Boulevard Associates purchased Parcel C in 2007.

2.2 Topographic Setting

According to the Camden, New Jersey-Pennsylvania, United States Geological Survey (USGS) 7.5-minute Topographic Quadrangle, the Site is approximately 13 feet above mean sea level. The

closest body of surface water is the Delaware River, which is adjacent to the Site to the southeast.

2.3 Site Geology

The Site is located in the City of Philadelphia, Philadelphia County within the Lowland and Intermediate Upland Section of the Atlantic Coastal Plain Physiographic Province, which traverses a southeast portion of Pennsylvania in a northeast to southwest orientation. It is characterized by rolling lowlands, shallow valleys, and isolated hills. A dendritic stream drainage pattern is common in this Province.

According to the Atlas of Preliminary Geologic Quadrangles of Pennsylvania, the Site is underlain by the Trenton Gravel Formation. This unconsolidated formation is characterized by gray to pale-reddish-brown, very gravelly sand with interbeds of cross-bedded sand and clay-silt. During Site investigation activities, sand and clay-silt was observed beneath the fill material where test pits or boreholes extended through the fill material. The Trenton Gravel is immediately underlain by the competent bedrock of the Wissahickon Schist. No on-Site test pits or bore holes extended to the depth of the Wissahickon Formation.

2.4 Site Soils

Soils at the Site are identified by the United States Department of Agriculture (USGS), Natural Resources Conservation Service (NRCS), as UB- Urban Land. Urban Land soils are those which have been so altered by human activities that the soil has lost its original characteristics and are thus unidentifiable.

2.5 Hydrology

2.5.1 Surface Water

The Delaware River bounds the Site to the southeast. Adjacent to the Site, the Delaware River is flowing southwest towards the Delaware Bay.

2.5.2 Groundwater

Based on the information from the monitoring well network previously present at the Site (all monitoring wells were closed in February 2019), groundwater occurs at a depth of 12 to 14 feet below ground surface (bgs) and is influenced by the diurnal effects of the Delaware River. Measurements indicate that groundwater flow is to the south-southeast towards the Delaware River under a hydraulic gradient range of 0.004 to 0.007.

On August 3, 2018 RT submitted a Final Report for groundwater on behalf of Dyott Corporation/Columbus Boulevard Associates/Beach Street Corporation. This Final report encompassed Parcels A, B, and C (2002 Beach Street, 2001 Richmond Street, and 2005 Richmond Street) and was approved on January 18, 2019 for attainment of a residential Statewide health standard in groundwater (non-use aquifer).

2.6 Wetlands

According to the National Wetlands Inventory mapping (available at <http://www.fws.gov/wetlands>), there are no wetland areas present at the Site.

2.7 Pennsylvania Natural Diversity Inventory

An October 18, 2018 search of the Pennsylvania Natural Diversity Inventory (PNDI; including databases for the Pennsylvania Department of Conservation and Natural Resources, the Pennsylvania Game Commission, the Pennsylvania Fish and Boat Commission, and the United States Fish and Wildlife Service) was performed to identify the presence of sensitive or threatened species or habitats within a ½-mile radius of the Site. The search identified a potential impact for sensitive or threatened species under the Pennsylvania Fish and Boat Commission database. The search did not identify the existence of species of special concern within the search area under the other agencies databases.

As a result of the identified potential impact to the Atlantic Sturgeon (*Acipenser oxyrinchus*), Shortnose Sturgeon (*Acipenser brevirostrum*), Bald Eagle (*Haliaeetus leucocephalus*) and Eastern Redbelly Turtle (*Pseudemys rubriventris*), ECS Mid-Atlantic, LLC (ECS) conducted an ecological assessment at the Site. The results of this assessment did not find any suitable spawn and/or forage areas (Short-nose and Atlantic Sturgeon), roosting and/or nesting sites (Bald Eagle) or basking habitat (Red-Bellied Turtle) at the Site. These findings were reviewed by the Pennsylvania Fish and Boat Commission who concurred with ECS that there would be no adverse impact to the above-mentioned species of special concern from the soil conditions at the Site. A copy of the PNDI report, ECS Ecological Assessment report and follow-up Pennsylvania Fish and Boat Commission correspondence are included in **Appendix D**.

An updated PNDI search was performed on January 19, 2021, which confirmed the previous results. A Site inspection was performed on February 22, 2021, which found no changes to the

Site conditions that would cause an adverse impact to the identified species. Photographs of the February 22, 2021 inspection and the updated PNDI report and PA Fish and Boat Commission report are included in **Appendix D**. The updated ecological review identified no new ecological concerns and confirms the findings of the 2018 ecological review that there is no adverse impact to the above-mentioned species of special concern from the soil conditions at the Site.

2.8 United States Environmental Protection Agency Determination

In a letter dated April 4, 2019, Manko, Gold, Katcher & Fox, LLP (MGK&F) submitted supporting documentation to the U.S. Environmental Protection Agency Region III (EPA) regarding the polychlorinated biphenyl (PCB) impacted soil that has been documented as existing at the Site (on Parcel B only). In correspondence dated April 24, 2019, EPA concurred with MGK&F's determination regarding the applicability of TSCA authority with regards to PCBs that were disposed, spilled, or otherwise discharged onto the soils at the Delaware Riverfront Parcels prior to April 18, 1978 in that PCB remediation waste is not required to be cleaned up in accordance with the regulations set forth in 40 C.F.R 761.61. Based on the supporting information provided by MGK&F, EPA concurred with the assessment that a cleanup, in accordance with 40 C.F.R 761.61, of the PCB remediation waste located at the Delaware Riverfront Parcels is not required because the PCBs were disposed, spilled, or otherwise discharged prior to April 18, 1978. A copy of the EPA correspondence has been included in **Appendix E**.

3.0 SITE CHARACTERIZATION

3.1 Soil Materials

Over the course of historic operations by the William Cramp & Sons Ship and Engine Building Company, the Site has been filled with various materials. After operations ceased at the Site (circa 1964), all structures were demolished and several phases of filling of the former shipbuilding docks occurred as permitted by the US Army Corps of Engineers (USACE). Prior work completed by others involved completion of test pits at various locations across the Site. This historic work was considered preliminary site characterization data. RT subsequently completed a soil investigation as part of the characterization of the Site. The Site investigation identified a relatively uniform cover of fill material across the Site. Former Shipways were found to be filled in with demolition debris and extensive fill is present throughout most of the Site. While conducting the site characterization, RT identified an area containing polychlorinated biphenyls (PCBs) in the southern portion of parcel B. Aside from the PCB-impacted area, no other location-specific area

of concern was identified. The extent of soil/fill media is considered typical and will be further discussed below.

3.2 Soil Media Investigation

Based on the historical use and the presence of the fill material at the Site, a soil media investigation was conducted to assess the environmental condition of the Site's soils (inclusive of soil and the fill material). The investigation was conducted through several iterations of test pits and surface sampling across the Site. The soil investigation was completed between 2003 and 2021 and involved Site sampling to determine areas of interest, and then delineation around specific areas (refer to **Figure 3** -Test Pit Location Map).

3.3 Soil Media Test Pits

RT installed 25 test pits and collected 4 surface soil samples across the Site from October 2003 to April 2008 and submitted 70 soil samples to a certified laboratory for analysis ranging from RCRA-8 metals, SVOCs, and PCBs. Keating Environmental Management, Inc. (KEM) excavated 17 test pits on the Site in January/February 2013 and submitted 8 samples for analysis (VOCs, SVOCs, PCBs, and Metals) (**Figure 3**). In addition, 55 test pits were excavated in PCB Area 1, suspect area of elevated PCB concentrations, with 144 samples being analyzed for PCB compounds (**Figure 4**). Six additional surface soil samples were collected from the northeast portion of Parcel B in February 2021.

The data sets have been tabulated as four subsets of data based on the proposed Site reuse and remedial approach; site-wide surface soil – 0-2 feet below ground surface (ft bgs) interval, site-wide subsurface soil – greater than 2 ft bgs, site-wide PCB and PCB Area 1. A sample location plan for each group is provided in the following Figures: **Figure 3** depicts the locations of the surface soil test pits/sample locations while **Figure 4** depicts the soil test pits installed within Area 1.

Soils encountered were visually inspected for content, odors, staining, moisture, and the presence of VOCs using a photoionization detector (PID) and logged onto a field activity log. Copies of the RT field activity & test pit logs are included in **Appendix B**. The soils encountered were described as fill material made up of brown sands and silts with pieces of railroad ties, brick, concrete, rocks, wood, metal, and asphalt. The fill material varied in content but was present in all the test pits across the Site. The KEM test pit logs can be found in **Appendix C**.

The initial round of test pits was installed in June 2003 and analyzed for metals, PCBs, and SVOCs. Additional test pits were installed at the Site in October 2003, February, March, and April 2004 to further characterize and delineate specific areas proximal to the October 2003 test pits for the presence of mercury and/or lead in soils. A subsequent series of test pits were installed in July 2006 with 11 soil samples analyzed for metals, PCBs, and SVOCs. Also, four surface soil (0-2 ft bgs) samples were collected in March 2008 utilizing a hand auger and analyzed for metals, PCBs, and SVOCs.

All soil analytical data is presented in **Tables 1a through 8**. The soil analytical data tables are organized by analysis and secondarily by surface (0-2 ft bgs) and subsurface (>2 ft bgs) depths. **Table 1a** shows the soil analytical results for surface SVOC analysis. **Table 1b** shows the soil analytical results for subsurface SVOC analysis. Likewise, **Tables 2a** and **2b** show the surface and subsurface soil analytical results for metals analysis, respectively and **Tables 3a** and **3b** show the surface and subsurface soil analytical results for PCBs, respectively. **Tables 4** through **7** depict the results of the 2013 sampling event conducted by KEM with **Table 4** detailing SVOC results, **Table 5** PCBs, **Table 6** Metals and **Table 7** VOCs. **Table 8** list the results of PCB analysis for samples collected within Area 1.

The field activity logs documenting the soil investigation are included in **Appendix B**, test pit logs can be found in **Appendix C** and laboratory soil analytical reports can be found in **Appendix A**.

3.4 Soil Media Quality Data

As the presence of regulated substances (except for PCBs) is site-wide due to the presence of fill material, the soil quality data has been evaluated from a site-wide perspective. The soil quality data is evaluated in this report with the understanding that any future Site reuse may be a mixed use of residential and non-residential, and that a non-use aquifer determination has been rendered by PADEP. A Final Report for groundwater was submitted to the PA DEP by RT on August 3, 2018. This report was prepared on behalf of Dyott Corporation/Columbus Boulevard Associates, LP/Beach Street Corporation and included Parcels A, B, and C (2002 Beach Street, 2001 Richmond Street, and 2005 Richmond Street). This report was approved on January 18, 2019 for attainment of a residential Statewide health standard in groundwater (non-use aquifer) for the contaminants listed in **Appendix H** (refer to DEP approval letter).

As previously mentioned, 97 test pits and 10 surface locations were installed across the Site. From these sample locations, 229 soil samples were collected from different depths and analyzed

for various compounds including VOCs, SVOCs, RCRA-8 metals, and PCBs. The following table summarizes the number of soil samples analyzed for each analytical category:

Analysis Category	Number of Soil Samples Analyzed		Total number of Samples Analyzed by Category
	Surface	Subsurface	
SVOCs	12	31	43
VOCs	1	7	8
Metals	8	26	34
PCBs	46	98	144

The following sections discuss the soil analytical results by analytical category site-wide, as well as Area 1 containing concentrations of PCBs, which were characterized as a specific AOC.

3.4.1 SVOCs – Surface Interval

Surface soil samples were analyzed for SVOCs. Benzo(a)pyrene was identified in 5 of the 6 surface soil samples at concentrations above the rSHS Direct Contact numeric value of 0.58 mg/kg with the highest concentration found in sample SS-19 at 4.4 mg/kg. Benzo(b)fluoranthene was also detected in SS-19 at a concentration of 5.9 mg/kg, which is above the rSHS Direct Contact numeric value of 3.5 mg/kg. Neither benzo(a)pyrene nor benzo(b)fluoranthene exceeded the residential nonuse aquifer soil to groundwater numeric value in any of the surface soil samples. The surface interval SVOC analytical data is compiled in **Tables 1a** and **4**.

RT collected six (6) surface soil samples (SS-101 through SS-106) on February 22, 2021 in the area depicted on **Figure 3**. These surface soil samples were collected at a depth of 6 to 12-inches and represent the northeastern section of Parcel B. The six samples were analyzed for SVOCs and the results can be found on **Table 1a**. Benzo(a)pyrene was identified in only one of the surface soil samples (SS-106) at a concentration of 6.7 mg/kg, which is above the rSHS Direct

Contact numeric value of 0.58 mg/kg. Benzo(b)fluoranthene (9.1 mg/kg) also exceeded the rSHS Direct Contact numeric value of 3.5 mg/kg in SS-106. Once again, neither benzo(a)pyrene nor benzo(b)fluoranthene exceeded the residential nonuse aquifer soil to groundwater numeric value in any of the supplemental surface soil samples. The results of the surface soil samples collected in 2021 are consistent with all prior surface soil SVOC data collected at the Site.

There were no exceedances of SVOC constituents analyzed in the surface soil interval above nonresidential medium specific concentrations (MSCs).

3.4.2 SVOCs – Subsurface Interval

Subsurface soil samples were analyzed for SVOCs. Five SVOC constituents, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene and dibenzo(a,h)anthracene, were identified in the subsurface soil at concentrations exceeding their respective rSHS Direct Contact numeric values. The subsurface interval SVOC analytical data is compiled in **Tables 1b** and **4**.

- benzo(a)anthracene was identified at concentrations exceeding the rSHS Direct Contact numeric value of 6 mg/kg in 3 of the 31 subsurface soil samples analyzed. There were no exceedances of the non-residential MSCs. All 31 soil samples were below the residential nonuse aquifer soil to groundwater numeric value.
- benzo(a)pyrene was identified at concentrations exceeding the rSHS Direct Contact numeric value of 0.58 mg/kg in 19 of the 31 subsurface soil samples analyzed. There were no exceedances of the non-residential MSCs. All 31 soil samples were below the residential nonuse aquifer soil to groundwater numeric value.
- benzo(b)fluoranthene was identified at concentrations exceeding the rSHS Direct Contact numeric value of 3.5 mg/kg in 7 of the 31 subsurface soil samples analyzed. There were no exceedances of the non-residential MSCs. All 31 soil samples were below the residential nonuse aquifer soil to groundwater numeric value.
- benzo(k)fluoranthene was identified at concentrations exceeding the rSHS Direct Contact numeric value of 4 mg/kg in 2 of the 31 subsurface soil samples analyzed. There were no exceedances of the non-residential MSCs. All 31 soil samples were below the residential nonuse aquifer soil to groundwater numeric value.
- dibenzo(a,h)anthracene was identified at concentrations exceeding the rSHS Direct Contact numeric value of 1 mg/kg in 2 of the 31 subsurface soil samples analyzed. Dibenzo(a,h)anthracene was not detected in sample S-10 (collected from TP-6 in June

2003) but the laboratory reporting limit exceeded the rSHS Direct Contact numeric value. There were no exceedances of the non-residential MSCs. All 31 soil samples were below the residential nonuse aquifer soil to groundwater numeric value.

There were no exceedances of other SVOC constituents analyzed in the subsurface soil interval.

3.4.3 Metals – Surface Interval

Surface soil samples were analyzed for metals. Three metals (arsenic, chromium, and lead) were identified in the surface soil at concentrations exceeding their respective rSHS Direct Contact numeric values. Chromium and lead were identified in the surface soil at concentrations also exceeding their respective nrSHS Direct Contact numeric values. The surface interval metals analytical data is compiled on **Tables 2a** and **6**.

- Arsenic was identified at concentrations exceeding the rSHS Direct Contact numeric value of 12 mg/kg in 3 of the 6 surface soil samples analyzed. There were no exceedances of the non-residential MSCs. The 6 surface soil samples were below the residential nonuse aquifer soil to groundwater numeric value.
- Total chromium was identified at concentrations exceeding the most stringent rSHS Direct Contact numeric value of 4 mg/kg in all 6 surface soil samples analyzed (as the analytical data reports total chromium and the Act 2 regulation provides SHS for trivalent and hexavalent chromium, the lower of the chromium numeric values are used to evaluate total chromium concentrations identified at the Site). There were two exceedances of the non-residential direct contact numeric value and no exceedances of the residential nonuse aquifer soil to groundwater numeric value.
- Lead was identified at concentrations exceeding the rSHS Direct Contact numeric value of 500 mg/kg in 2 of the 8 surface soil samples analyzed. One surface soil sample (TP-5 1ft bgs) exceeded the nrSHS direct contact numeric value of 1,000 mg/kg. A soil sample collected from TP-5 from a depth of 7½ ft bgs had a lead concentration of 61 mg/kg, indicating that the lead concentration in soil is bound close to the surface proximal to test pit TP-5 (located in Area 1 associated with the PCB-impacted soil). There were no exceedances of the residential nonuse aquifer soil to groundwater numeric value.

There were no exceedances of other metals analyzed in the surface soil interval.

3.4.4 Metals – Subsurface Interval

Subsurface soil samples were analyzed for metals. Three metals (arsenic, chromium, and lead) were identified in the subsurface soil at concentrations exceeding their respective rSHS Direct Contact numeric values. Lead was identified in the subsurface soil at concentrations also exceeding the nrSHS Direct Contact numeric value. The subsurface interval metals analytical data is compiled in **Tables 2b and 6**.

- Arsenic was identified at concentrations exceeding the rSHS Direct Contact numeric value of 12 mg/kg in 8 of the 26 subsurface soil samples analyzed. All 26 subsurface soil samples were below the residential nonuse aquifer soil to groundwater numeric value and the non-residential direct contact numeric value.
- Total chromium was identified at concentrations exceeding the most stringent rSHS Direct Contact numeric value of 4 mg/kg in all of the 26 subsurface soil samples analyzed (as the analytical data reports total chromium and the Act 2 regulation provides SHS for trivalent and hexavalent chromium, the lower of the chromium numeric values are used to evaluate total chromium concentrations identified at the Site). All 26 subsurface soil samples were below the residential nonuse aquifer soil to groundwater numeric value and the non-residential direct contact numeric value.
- Lead was identified at concentrations exceeding the most stringent rSHS Direct Contact numeric value of 500 mg/kg in 7 of the 26 subsurface soil samples analyzed. All 26 subsurface soil samples were below the residential nonuse aquifer soil to groundwater numeric value and the non-residential direct contact numeric value.
- Thallium (<12 mg/kg) had an elevated reporting limit above the rSHS Direct Contact numeric value of 2 mg/kg (direct contact) in KEM sample TP 14-5.0. There were elevated concentrations of other metals in this sample, and as such, the reporting limit was elevated due to dilution. Thallium was not detected in any other soil sample collected from the Site. It is the opinion of the Professional Geologist that there is no release of thallium at the Site as a result of this elevated reporting limit for thallium in one subsurface soil sample.

There were no exceedances of other metals analyzed in the subsurface soil interval.

3.4.5 PCBs – Surface Interval (outside of Area 1)

Surface soil samples were analyzed for PCBs. None of the 5 surface soil samples collected outside of Area 1 identified any PCB Aroclors at concentrations exceeding their respective rSHS Direct Contact or residential nonuse aquifer soil to groundwater numeric values. The laboratory

detection limits for Aroclors 1221 and 1232 are above the current site-specific vapor intrusion screening levels, but these Aroclors have never been detected in any concentration at the site. The surface interval PCB analytical data, for samples collected outside of Area 1, is shown in **Tables 3a and 5**. The PCB analytical data for samples collected within Area 1 is shown in **Table 8** and discussed below.

3.4.6 PCBs – Subsurface Interval (outside of Area 1)

Subsurface soil samples were analyzed for PCBs. None of the 23 subsurface soil samples collected outside of Area 1 identified any PCB Aroclors at concentrations exceeding their respective rSHS Direct Contact or residential nonuse aquifer soil to groundwater numeric values. Two subsurface soil samples collected from TP-3 and TP-5 in 2006 had laboratory reporting limits that exceeded the residential nonuse aquifer soil to groundwater numeric values for PCB Aroclors 1221 and 1232. The laboratory detection limits for Aroclors 1221 and 1232 are above the current site-specific vapor intrusion screening levels, but these Aroclors have never been detected in any concentration at the site. The subsurface interval PCB analytical data, for samples collected outside of Area 1, is shown in **Tables 3b and 5**. The PCB analytical data for samples collected within Area 1 is shown in **Table 8** and discussed below.

3.4.7 PCB – Area 1

Due to the elevated PCB concentrations in the soil samples collected from TP-5 (2003) & TP-4 (2006), additional investigative efforts were conducted in Area 1, as shown in **Figure 4**. In total, 59 test pits were excavated resulting in 116 total samples collected in Area 1 (40 samples from 0-2-feet and 76 samples 2-12-feet). Although several samples had laboratory reporting limits exceeding one or more of the Aroclor-specific MSCs or site-specific vapor intrusion screening levels due to dilution effects, only the PCB Aroclors 1242, 1248, 1254, and 1260 have ever been detected at the Site at any concentration. The Area 1 PCB results are shown in **Table 8** and discussed below:

3.4.7.1 Surface Interval

Of the 40 surface samples (0-2 feet in depth) collected in Area 1, 21 were reported to be below both the residential and non-residential SHS MSCs for each of the seven (7) PCB Aroclors analyzed. Seventy-five percent of these samples were collected from locations around the perimeter of Area 1. The highest concentrations of PCBs in surface soils were detected in TP-105 from 1.5 to 2-feet (located in approximate center of Area 1); reported as 870 mg/kg of PCB-

1254 and 1,500 mg/kg of PCB-1260. PCB-1248 was detected in 1 of the 40 surface soil samples collected from Area 1, at a concentration exceeding both the residential direct contact and nonuse aquifer soil to groundwater numeric values. PCB-1254 was detected in 17 of the 40 surface soil samples collected from Area 1, at concentrations exceeding either the residential or non-residential direct contact or nonuse aquifer soil to groundwater numeric values. PCB-1260 was detected in 7 of the 40 surface soil samples collected from Area 1, at concentrations exceeding either the residential or non-residential direct contact or nonuse aquifer soil to groundwater numeric values.

3.4.7.2 Subsurface Interval

PCB compounds were detected in 36 of the 76 subsurface soil samples (2 – 12 feet in depth) at concentrations exceeding their respective residential or non-residential direct contact or nonuse aquifer soil to groundwater numeric values. The highest concentration of PCBs in subsurface soils was detected in TP-307 (near the center of Area 1) at a depth of 3.5 to 4-feet. In this sample, PCB-1260 was reported at 2,200 mg/kg which exceeds both the residential and non-residential soil to groundwater numeric values, although this value does not exceed the non-residential direct contact numeric value (190,000 mg/kg). PCB-1248 was detected in 4 of the 76 surface soil samples collected from Area 1, at concentrations exceeding either the residential direct contact or nonuse aquifer soil to groundwater numeric values. PCB-1254 was detected in 26 of the 76 subsurface soil samples collected from Area 1, at concentrations exceeding either the residential or non-residential direct contact or nonuse aquifer soil to groundwater numeric values. PCB-1260 was detected in 20 of the 76 surface soil samples collected from Area 1, at concentrations exceeding either the residential or non-residential direct contact or nonuse aquifer soil to groundwater numeric values.

Most of the PCB constituents of concern were reported below the laboratory detection limits for 81 percent of the individual compounds analyzed. There were no exceedances of the nonresidential direct contact numeric values in the subsurface soils.

The PCB Area 1 was vertically and horizontally delineated, as shown in **Figure 4**.

3.4.8 VOCs – Surface Interval

As indicated on **Table 7**, VOC constituents were analyzed on the surface and subsurface soil samples collected during the 2013 KEM investigation. Of the 9 samples collected, only TP 1 1.5 (1.5 – 2 foot) was considered a surface sample. Of the 51 compounds analyzed on this surface

sample, only methylcyclohexane was reported above the laboratory reporting limit at a concentration of 0.0019 mg/kg. There are no SHS numeric or vapor intrusion screening values for this compound. 1,2-Dibromo-3-chloropropane (<0.0016 mg/kg in TP 1-1.5) was reported at a concentration less than the laboratory's reporting limit in 2013, which is now in excess of the site-specific residential and nonresidential vapor intrusion screening levels (0.00092 mg/kg). 1,4-Dioxane (<0.110 mg/kg in TP 1-1.5) was reported at a concentration less than the laboratory's reporting limit in 2013, which is now in excess of the site-specific residential and nonresidential vapor intrusion screening levels (0.023 mg/kg and 0.59 mg/kg, respectively).

3.4.9 VOCs – Subsurface Interval

8 subsurface soil samples obtained during the KEM investigation in 2013 were analyzed for VOCs as shown in **Table 7**. Sample depths ranged from 2' to 8.5'. Acetone, benzene, 2-butanone, carbon disulfide, cyclohexane, 1,2-dichlorobenzene, 1,1-dichloroethane, cis-1,2-dichloroethene, ethylbenzene, isopropylbenzene, methylcyclohexane, tetrachloroethene, toluene, and total xylene were detected above laboratory reporting limits. None of these reported compounds were detected at a concentration exceeding their respective residential numeric values or vapor intrusion screening values. 1,2-Dibromo-3-chloropropane (<0.089 mg/kg in TP 3-8.0, <0.0014 mg/kg in TP 5-2.0, <0.130 mg/kg in TP 12-8.0, <0.00099 mg/kg in TP 14-5.0, <0.0011 in TP 16-7.5) was reported at concentrations less than the laboratory's reporting limits in 2013, which are now in excess of the residential direct contact numeric value or the site-specific residential and nonresidential vapor intrusion screening levels. The current residential direct contact numeric value for 1,2-Dibromo-3-chloropropane is 0.029 mg/kg and the current site-specific residential and nonresidential vapor intrusion screening levels are 0.00092 mg/kg. 1,4-Dioxane (<6.0 mg/kg in TP 3-8.0, <0.092 mg/kg in TP 5-2.0, <0.056 mg/kg in TP 8-4.0, <0.056 mg/kg in TP 9-4.0, <0.074 mg/kg in TP 11-4.5, <8.500 mg/kg in TP 12-8.0, <0.066 mg/kg in TP 14-5.0, <0.074 mg/kg in TP 16-7.5) was reported at concentrations less than the laboratory's reporting limits in 2013, which are now in excess of the residential nonuse aquifer soil to groundwater numeric value, or the site-specific residential or nonresidential vapor intrusion screening levels. The current residential nonuse aquifer soil to groundwater numeric value for 1,4-dioxane is 6.00 mg/kg and the current site-specific residential and nonresidential vapor intrusion screening levels are 0.023 mg/kg and 0.59 mg/kg, respectively. Please refer to the data presented on **Table 7**.

4.0 SITE CONCEPTUAL MODEL

A Final Report for Groundwater was prepared by RT in July 2018 and approved by the Department in January 2019. As part of this investigation, RT conducted a Fate and Transport Analysis, which investigated the various potential exposure routes present at the site. The following is a discussion of all existing and potential future migration pathways that may exist between the soil source and potential receptors.

4.1 Soil Direct-Contact Pathway

Site soil is impacted with several regulated metals, SVOCs, and PCBs at concentrations exceeding residential direct-contact numeric values. If left unmitigated, direct contact with impacted soils (through dermal contact, ingestion, or inhalation of airborne dust that may enter breathing spaces or other areas of exposure) is a potentially complete current and future pathway for human receptors (including Site construction workers and potential future Site workers/consumers). This pathway will be eliminated by implementation of the engineering and institutional controls discussed in the Cleanup Plan.

4.2 Soil-to-Groundwater Pathway

Site soil is impacted within Area 1 with PCBs at concentrations exceeding residential nonuse aquifer soil-to-groundwater numeric values. However, the approved Final Report for groundwater indicates that Site groundwater has not been impacted with these substances at concentrations exceeding residential groundwater MSCs, demonstrating that these compounds are not leaching from the source soil at quantities of sufficient magnitude to impact groundwater. Therefore, the groundwater data demonstrates that current and future soil-to-groundwater pathway is incomplete and does not require additional investigation

4.3 Groundwater Direct-Contact Pathway

Exposure to Site groundwater could occur via direct contact (such as through ingestion and dermal contact) with human receptors and discharges to the ecological receptor (Delaware River). As previously mentioned, the approved Final Report for groundwater indicates that Site groundwater has not been impacted with investigated VOCs, SVOCs, PCBs or metals in excess of non-use aquifer residential groundwater MSCs. Therefore, the current and future groundwater pathway is incomplete for human and ecological receptors and does not require additional investigation. In addition, groundwater is not used as a source of drinking water in the area.

Municipal water is provided through the Philadelphia Water Department.

4.4 Surface Water Direct-Contact Pathway

A surface water body, Delaware River, bounds the Site to the southeast and represents the ecological receptor considered in the evaluation. As discussed in the previously-approved Final Report for groundwater, Site groundwater was not found to be impacted with investigated VOCs, SVOCs, PCBs or metals in excess of residential non-use aquifer groundwater MSCs. Therefore, the current and future groundwater-to-surface water pathway is incomplete and does not require additional investigation.

Exposure to surface water could occur via direct contact (such as through ingestion and dermal contact) with human receptors and ecological populations residing in the Delaware River. Delaware River surface water data presented in the Final Report for Groundwater was not found to demonstrate concentrations of investigated metals in excess of residential groundwater MSCs. For these inorganic compounds, the current and future surface water pathway is incomplete for human and ecological receptors and does not require additional investigation.

4.5 Vapor Intrusion Pathway

Exposure to volatile or semi-volatile organic vapors emanating from impacted soil may occur with potential human receptors. An evaluation of the vapor intrusion pathway was performed by RT in accordance with PA DEP's guidance on "Vapor intrusion into Building from Groundwater and Soil" under the Act 2 Statewide Health Standard (January 19, 2019).

Contaminants detected in source soil included semi-volatile organic and inorganic compounds that have a very low tendency to volatilize to air. Site COCs also include volatile compounds which can be found on Table 7. The Site VOC COCs were evaluated against the site-specific screening values (these are the SHS screening values reduced by a factor of 10). None of the Site COCs are considered a contaminant of potential indoor air concern (COPIAC) for soil, and the inorganic compounds are not considered a concern for vapor intrusion. As such, the current and future vapor intrusion pathway requires no further evaluation for Site soil.

The Cleanup Plan (Section 5.2) specifies the steps that will be completed for further evaluation of vapor intrusion for PCB Aroclors 1221 and 1232, specifically for PCB Area 1. While neither of these Aroclors have ever been detected at the Site in any concentration, several samples had

laboratory reporting limits exceeding one or more of the site-specific vapor intrusion screening levels due to dilution effects.

5.0 PROPOSED CLEANUP PLAN

Based on the results of the RI characterization activities, most soil samples collected at the Site meet Act 2 residential MSCs. However, the results of the Site-Specific pathway evaluation revealed that direct contact to soils in certain areas of the Site is an open exposure pathway that needs to be addressed due to the presence of benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, dibenzo(a,h)anthracene, arsenic, chromium, lead, and PCB Aroclors 1248, 1254 1260 at concentrations that exceed their Act 2 residential direct contact soil numeric values. Therefore, the Cleanup Plan for the Site calls for the capping of the soils across the Site to eliminate this direct contact exposure pathway, worker protection during construction at the Site, and further evaluation of the vapor intrusion pathway to be performed once a development plan is prepared.

5.1 Residential Direct Contact

Once redeveloped, the capping measures for the Site will include the use of asphalt or paver roadways/driveways, and parking areas, the concrete slabs associated with the on-Site buildings, and a 2-foot certified clean fill soil buffer (or other landscaping materials) in any areas not capped with concrete, asphalt or paver roadways/driveways, and parking areas. This cap will eliminate the direct contact pathway for soils. Since engineering controls will have been used to demonstrate a Site-Specific Standard, an Environmental Covenant will be prepared and recorded for the Site as described in Section 5.4

5.2 Worker Protection

In order to protect construction workers from open exposure pathways during Site development, the following hazards will be included in the contractor Health & Safety Plan and reviewed with Site workers at the start of each shift (tailgate safety meetings):

5.2.1 POTENTIAL HAZARDS

5.2.1.1 Chemical Hazards:

- Site soils are known to be contaminated with regulated substances as a result of historic industrial operations at the site.

5.2.1.2 Physical Hazards:

- Utility and cap installation activities pose a physical hazard, and also a slip, trip and fall hazard.
- The use of heavy equipment poses a physical hazard to workers in the work area.
- The limited visibility of the equipment operator should be considered by all workers near the work area.
- Potential noise hazards exist in the work area due to the use of heavy equipment during utility and cap installation activities.

5.2.1.3 Biological Hazards:

- If biological hazards are identified prior or during the excavation activities, the hazard must be identified in this Health and Safety Plan and each employee working under this Health and Safety Plan must be informed of the hazard.

5.2.2 HAZARD ANALYSIS

5.2.2.1 Chemical Hazards – Soils contaminated with regulated substances

Routes of Exposure

- Ingestion - from smoking, eating, or drinking without washing
- Inhalation - if high airborne levels (dust) are generated

5.2.3 Hazard Elimination

- Personnel Protection Equipment will be primary protection. Workers shall be prepared to begin work with Level D protection including:

Hard hats

Long sleeves

Coveralls (disposable Tyvek suites)

Gloves (disposable)

Steel tipped safety shoes

Hearing protection

Dust filtering respirator (as needed based on Safety Officer Instructions)

5.3 Vapor Evaluation

5.3.1 Preliminary Design Layout

Once an architectural rendering of the Site development plan is prepared, the Site will be evaluated to determine if the proposed structures will be located on or within the proximity distance (100 linear feet) of the identified PCB impacted area where certain laboratory reporting limits exceeded the

site-specific residential soil vapor screening values for PCB Aroclors 1221 and 1232.

5.3.2 *Soil Gas Sampling*

Upon the completion of an approved development and prior to the initiation of construction activities, a vapor evaluation will be performed in any area where a proposed building footprint will overlies or fall within the proximity distance of the previously identified PCB impacted area. Testing measures may include hand or GeoProbe installed soil vapor points with Summa canisters, Polyurethane Foam sampling, or equivalent. Samples collected will be analyzed for PCB Aroclor 1221 and 1232.

5.3.3 *Data Evaluation*

Once the soil vapor sampling events are completed, the data will be evaluated to document if there is a suspect vapor intrusion concern. If there is a suspect vapor intrusion concern upon completion of the testing, a mitigation system will be designed and installed below the concrete slab to passively or actively remove vapors.

5.3.4 *Possible Vapor Mitigation Measures*

Depending on the results of the vapor evaluation, one possible vapor mitigation measure may include the installation of a vapor barrier and passive or active venting system beneath the concrete floor slab as an engineering control. Further specific details of a vapor mitigation system, if needed, can be provided in a Cleanup Plan Addendum.

5.4 Post-Remedial Care Plan

The Site shall be subject to the engineering controls described in the Cleanup Plan. These controls will be detailed in an Environmental Covenant (EC) to be prepared and recorded for the Site based on the completion of the Cleanup Plan. As outlined in the Cleanup Plan, the remedy for this Site will be comprised of capping measures that will include the use of asphalt or paver roadways/driveways, and parking areas, the concrete slabs associated with the on-Site buildings, and a 2-foot certified clean fill soil buffer (or other landscaping materials) in any areas not capped with concrete, asphalt or paver roadways/driveways, and parking areas. This engineering control will eliminate the direct contact pathway for soils. Routine and periodic inspections of the integrity, operability, and effectiveness of engineering controls will be conducted to ensure compliance with the activity and use limitations for the site. The routine and periodic inspections will be conducted

annually, beginning with the first anniversary of the date of PA DEP's approval of a Final Report. The results of these inspections, and any maintenance or repair activities required as a result of the inspections, will be recorded and kept at the Site. The information will be made available to PADEP upon request. Once the EC for the Site is approved and recorded, any future activity on the Site that compromises the integrity of an engineering control, other than routine maintenance activities, or otherwise violates a restriction or requirement placed on the use of the Site will require written approval from the PA DEP as required by the terms of the EC.

6.0 CONCLUSIONS

As indicated by Site characterization activities at the Site from 2003 through 2021, Site soils have been impacted with SVOCs, metals and PCB compounds from historic shipbuilding and fill operations.

Five (5) SVOC constituents, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene and dibenzo(a,h)anthracene, were identified in the subsurface soil at concentrations exceeding residential direct-contact numeric values, but only benzo(a) pyrene is widely distributed in Site soils above the standard. No SVOCs were detected above the residential nonuse aquifer soil-to-groundwater numeric values.

Arsenic, chromium and lead were detected in Site soils at concentrations exceeding residential direct-contact numeric values, while no metals were detected above the residential nonuse aquifer numeric values.

PCB compounds were detected in Site surface and subsurface soils at concentrations exceeding residential and nonresidential Statewide Health Standard numeric value and are primarily located in Area 1 (refer to Figure 4). EPA Region III recently issued a determination regarding PCB-impacted soils at the Site by stating that cleanup of PCB remediation waste located at the Delaware Riverfront Parcels is not regulated under the Toxic Substances Control Act (TSCA) because the PCBs were disposed, spilled, or otherwise discharged prior to April 18, 1978. The PCB-impacted area, Area 1, will be addressed in a manner similar to other site impacts to eliminate risks of exposure by potential receptors.

The proposed Cleanup Plan addresses the only potentially complete exposure pathway at the site and calls for the capping of the soils across the Site to eliminate the soil direct contact

pathway. Since engineering controls will have been used to demonstrate a Site-Specific Standard, an EC will be prepared and recorded for the Site.

Once the requirements of the Cleanup Plan have been implemented, a Final Report will be prepared and submitted to PADEP to document attainment of a combination of Act 2 Residential Statewide Health and Site-Specific Standards for soils. The Final Report will include a Post-Remediation Care Plan to ensure that the cap is properly maintained.

7.0 PUBLIC INVOLVEMENT PLAN

The remediator prepared a Public Involvement Plan (PIP) dated February 22, 2019 for 2001 Beach Street (eFACTS PF No. 8131556) (Parcel A), 2001 Richmond Street (eFACTS PF No. 831661) (Parcel B) and 2005 Richmond Street (eFACTS PF No. 831562) (Parcel C) properties. A public meeting was held at Oxford Mills on the evening of April 15, 2019. The purpose of the meeting was for the remediator and their representatives to present data collected at the Site and explain the remedial process. A notice of the public meeting was published in *The Philadelphia Daily News* on March 15, 2019 with documents regarding the properties being made available for public review in advance of the meeting at the Fishtown Community Library. A letter informing the City and the Department of the meeting is included in **Appendix F**.

The remediator and their representatives participated in the meeting by providing information and answering questions from those in attendance. Information presented included the results of the soil sampling that had been conducted on Parcels B & C. Questions from the attendees related to the environmental conditions of the properties, plans for future remediation and site development, and dust control measures that will be implemented as the work progresses. No additional question's regarding the properties have been received by the remediator. A copy of the list of attendees and responses to the questions received has also been included in **Attachment F**.

In order to satisfy the PIP, RT set up a Resource Section on its website (www.rtenv.com) to include a copy of the current RIR/CP document and thus make it available for public review. Notification letters describing the availability of the document on the website were submitted to the Philadelphia Health Department and the District 1 Council Member along with email notification to each individual who attended the April 15, 2019 Public Involvement Meeting. A

public notice was published in the legal section of the Philadelphia Inquirer on March 9, 2021 which described the newly instituted public information website that includes relevant documents. A copy of the October 2020 document titled “Former Cramp shipyard Site Parcels B and C” (report) constitutes a combined remedial investigation report and cleanup plan as defined in Chapter 3, which this document updates. Both reports will be available on the website.

In addition, the legal advertisement also indicates that public comments may be submitted in writing within thirty (30) days of the publication date to RT Environmental Services, Inc., 215 W. Church Road, King of Prussia, PA 19406, Attention: Mr. Craig Herr or via email to: cherr@rtenv.com by April 9, 2021. Copies of the certified notification letters, legal advertisement and proof-of-publication can be found in **Appendix F**.

8.0 MUNICIPAL AND PUBLIC NOTIFICATIONS

In accordance with Section 250.5(a) of the Act 2 regulations and Sections 303(h)(i)(ii) / 303(h)(2) of the Act, Dyott submitted a Notice of Intent to Remediate (NIR) to the PADEP Southeastern Regional Office on January 7, 2019, while Columbus Boulevard Associates submitted an NIR on January 4, 2019. In addition, the City of Philadelphia Health Department was provided a copy of the NIR submission via certified mail on December 20, 2018. A summary of the NIR was published as a legal notice in the *Philadelphia Daily News* on December 24, 2018. The NIR states that the property owner intends to demonstrate attainment of the Site-Specific Standard/Statewide Health Standard for constituents of concern identified in Site soil. The proposed future use is undetermined but may include mixed uses. Copies of the *Philadelphia Daily News* proof of publication and certified mail receipts are included in **Appendix G**.

Notes and Definitions

A-01	High surrogate recovery associated with the dilution/matrix of the sample.
DILN	Due to matrix interference and or sample dilution the detection limits for this sample have been elevated.
G4	The laboratory control spike recoveries associated with this sample were below the laboratory's established acceptance criteria.
O3	One or more internal standard recoveries were above the method specified acceptance criteria.
O4	One or more surrogate recoveries were below the laboratory's established acceptance criteria.
O7	The reporting limits for this sample have been raised due to low sample weight, volume and/or weight to methanol volume ratio.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

RE: Cramps Shipyard

Enclosed are the results of analyses for samples received by the laboratory on 10/07/03 09:30. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "AS", with a long horizontal flourish extending to the right.

Notes and Definitions

- MS4X The source sample result for this MS/MSD is greater than 4 times the spike level, therefore % recoveries are statistically insignificant.
- G02 The matrix QC recoveries associated with this sample were below the laboratory's established acceptance criteria.
- G01 The matrix QC recoveries associated with this sample were above the laboratory's established acceptance criteria.
- DILN Due to matrix interference and or sample dilution the detection limits for this sample have been elevated.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

Company Name: RT Environmental Please FAX

Project Name: Dyott / Loveland

LAB ID Numbers:

Upon sample inspection/preparation we determined that your samples were out of specification for the following:

Sample Specification Problems

Information Does Not Match

Affected Sample ID(s): TP-11(12), TP-12(12) & TP-13(11)

Comments: TP-11(12), TP-12(12) & TP-13(11) labels have Project name of Dyott. COC has project name of Loveland.

Please indicate below how we should proceed with this project, sign and return.

Proceed with analysis:

Hold for further instructions:

Client Comments:

Please FAX back to the Login Department or call with any questions. Thank you for your business.

RE: Dyott St.

Enclosed are the results of analyses for samples received by the laboratory on 07/06/06 16:00. If you have any questions concerning the report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Enid Dunmire", with a long horizontal flourish extending to the right.

Enid Dunmire

Notes and Definitions

- O5 One or more surrogate recoveries were above the laboratory's established acceptance criteria.
- O11 Surrogate recovery N.D. due to the dilution and/or matrix of the sample.
- G01 The matrix QC recoveries associated with this sample were above the laboratory's established acceptance criteria.
- DILN Due to matrix interference and or sample dilution the detection limits for this sample have been elevated.
- 10 This compound was below the method control limits in the Check Standard associated with this sample.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

Notes and Definitions

- RPD The Relative Percent Difference was above the acceptance limit of 20%.
- O5 One or more surrogate recoveries were above the laboratory's established acceptance criteria.
- O11 Surrogate recovery N.D. due to the dilution and/or matrix of the sample.
- J The reported concentration for this analyte is an estimated value. The reported concentration is above the method detection limit, but below the limit of quantitation.
- G03 The laboratory control spike recoveries associated with this sample were above the laboratory's established acceptance criteria.
- DILN Due to matrix interference and or sample dilution the detection limits for this sample have been elevated.
- 10 This compound was below the method control limits in the Check Standard associated with this sample.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

Subject: 70588-13 COC

Enid,

Attached are the samples we want to run for the Riverfront – PCB project. All samples will be run for PCBs on a 5 day turn. We need to have the samples by mid-day on June 6th to decide if we need to run more. Please let me know if this timing is a problem. Thanks.

Thomas Donovan

% Solids	82.5	0.01 % by Weight		1	7102409	10/24/07	10/24/07	EPA 160.3	

TestAmerica - King Of Prussia, PA

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Enid Dunmire, Project Manager

RT ENVIRONMENTAL
215 West Church Road
King of Prussia PA, 19406

Project: Riverfront
Project Number: 70588-13
Project Manager: Craig Herr

Reported:
11/15/07 17:11

Notes and Definitions

- O5 One or more surrogate recoveries were above the laboratory's established acceptance criteria.
- O4 One or more surrogate recoveries were below the laboratory's established acceptance criteria.
- O11 Surrogate recovery N.D. due to the dilution and/or matrix of the sample.
- G01 The matrix QC recoveries associated with this sample were above the laboratory's established acceptance criteria.
- E Reported result is over instrument calibration range. This result is an estimate; the true result may be higher.
- DILN Due to matrix interference and or sample dilution the detection limits for this sample have been elevated
- 11 This compound was above the method control limits in the Check Standard associated with this sample
- 10 This compound was below the method control limits in the Check Standard associated with this sample
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

RE: Riverfront

Enclosed are the results of analyses for samples received by the laboratory on 11/14/07 14:13. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in blue ink, appearing to read "Enid Dunmire". The signature is stylized with a large initial "E" and a long horizontal stroke at the end.

Notes and Definitions

- O4 One or more surrogate recoveries were below the laboratory's established acceptance criteria.
- O11 Surrogate recovery N.D. due to the dilution and/or matrix of the sample.
- GCRPD The RPD between the primary and secondary columns was greater than the method specified RPD of 40%.
- E Reported result is over instrument calibration range. This result is an estimate; the true result may be higher.
- DILN Due to matrix interference and or sample dilution the detection limits for this sample have been elevated.
- 10 This compound was below the method control limits in the Check Standard associated with this sample.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

Notes and Definitions

PRLM Preliminary results

O4 One or more surrogate recoveries were below the laboratory's established acceptance criteria

O11 Surrogate recovery N.D. due to the dilution and/or matrix of the sample

J The reported concentration for this analyte is an estimated value. The reported concentration is above the method detection limit, but below the limit of quantitation.

DILN Due to matrix interference and or sample dilution the detection limits for this sample have been elevated

A-01d QC needed

A-01c QC needed

A-01b Needs QC.

A-01a needs qc and end check

A-01 needs qc

DET Analyte DETECTED

ND Analyte NOT DETECTED at or above the reporting limit

NR Not Reported

dry Sample results reported on a dry weight basis

RPD Relative Percent Difference

Notes and Definitions

RPD The Relative Percent Difference was above the acceptance limit of 20%.

PRLM Preliminary results

O4 One or more surrogate recoveries were below the laboratory's established acceptance criteria.

O12 The reporting limits for this sample have been raised due to high final volume of extract.

MS4X The source sample result for this MS/MSD is greater than 4 times the spike level, therefore % recoveries are statistically insignificant.

GCRPD The RPD between the primary and secondary columns was greater than the method specified RPD of 40%.

G04 The laboratory control spike recoveries associated with this sample were below the laboratory's established acceptance criteria.

G02 The matrix QC recoveries associated with this sample were below the laboratory's established acceptance criteria.

G01 The matrix QC recoveries associated with this sample were above the laboratory's established acceptance criteria.

Dup The %RSD between the sample and its duplicate is outside the method acceptable criteria.

DILN Due to matrix interference and or sample dilution the detection limits for this sample have been elevated.

A-01 End check needed.

Notes and Definitions

RPD The Relative Percent Difference was above the acceptance limit of 20%.

PRLM Preliminary results

O4 One or more surrogate recoveries were below the laboratory's established acceptance criteria.

O12 The reporting limits for this sample have been raised due to high final volume of extract.

MS4X The source sample result for this MS/MSD is greater than 4 times the spike level, therefore % recoveries are statistically insignificant.

GCRPD The RPD between the primary and secondary columns was greater than the method specified RPD of 40%.

G04 The laboratory control spike recoveries associated with this sample were below the laboratory's established acceptance criteria.

G02 The matrix QC recoveries associated with this sample were below the laboratory's established acceptance criteria.

G01 The matrix QC recoveries associated with this sample were above the laboratory's established acceptance criteria.

Dup The %RSD between the sample and its duplicate is outside the method acceptable criteria.

DILN Due to matrix interference and or sample dilution the detection limits for this sample have been elevated.

A-01 End check needed.

DET Analyte DETECTED

ND Analyte NOT DETECTED at or above the reporting limit

NR Not Reported

Sample Summary

KEM Partners, Inc.

Job No: JB27732

Anderson Phase II
Project No: 7311

Sample Number	Collected Date	Time By	Received	Matrix Code	Type	Client Sample ID
JB27732-1	01/31/13	09:02 SW	01/31/13	SO	Soil	TP1-1.5
JB27732-2	01/31/13	11:20 SW	01/31/13	SO	Soil	TP3-8.0
JB27732-3	01/31/13	14:25 SW	01/31/13	SO	Soil	TP5-2.0

Soil samples reported on a dry weight basis unless otherwise indicated on result page.

CASE NARRATIVE / CONFORMANCE SUMMARY

Client: KEM Partners, Inc.

Job No JB27732

Site: Anderson Phase II

Report Date 2/18/2013 8:21:07 AM

On 01/31/2013, 3 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a temperature of 1.2 C. Samples were intact and chemically preserved, unless noted below. An Accutest Job Number of JB27732 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: SO **Batch ID:** VE8772

- All samples were analyzed within the recommended method holding time.
- Sample(s) JB27765-3MS, JB27765-3MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- JB27732-2: Dilution required due to matrix interference.

Matrix: SO **Batch ID:** VX5772

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB27838-1DUP, JB27838-3MS, JB27838-1DUP were used as the QC samples indicated.
- RPD(s) for Duplicate for Isopropylbenzene are outside control limits for sample JB27838-1DUP. High RPD due to low concentration of hit

Extractables by GCMS By Method SW846 8270D

Matrix: SO **Batch ID:** OP63503

- All samples were extracted within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB27732-1MS, JB27732-1MSD were used as the QC samples indicated.

Extractables by GC By Method SW846 8082A

Matrix: SO **Batch ID:** OP63322

- All samples were extracted within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB27695-4MS, JB27695-4MSD, OP63322-MSMSD were used as the QC samples indicated.

Metals By Method SW846 6010C**Matrix:** SO**Batch ID:** MP69587

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB26779-98MS, JB26779-98MSD, JB26779-98SDL were used as the QC samples for metals.
- Matrix Spike Recovery(s) for Antimony are outside control limits. Spike recovery indicates possible matrix interference and/or sample nonhomogeneity.
- Matrix Spike Duplicate Recovery(s) for Antimony, Chromium are outside control limits. Probable cause due to matrix interference.
- RPD(s) for MSD for Chromium are outside control limits for sample MP69587-S2. High rpd due to possible sample nonhomogeneity.
- RPD(s) for Serial Dilution for Antimony, Cadmium, Silver, Thallium are outside control limits for sample MP69587-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).
- MP69587-SD1 for Copper: Serial dilution indicates possible matrix interference.
- MP69587-SD1 for Arsenic: Serial dilution indicates possible matrix interference.

Metals By Method SW846 7471B**Matrix:** SO**Batch ID:** MP69583

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB27695-4MS, JB27695-4MSD were used as the QC samples for metals.

Wet Chemistry By Method SM2540 G-97**Matrix:** SO**Batch ID:** GN79319

- The data for SM2540 G-97 meets quality control requirements.

Wet Chemistry By Method SW846 9012 M/LACHAT**Matrix:** SO**Batch ID:** GP69836

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB27548-61DUP, JB27548-61MS were used as the QC samples for Cyanide.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

Sample Summary

KEM Partners, Inc.

Job No: JB27829

Anderson Phase II
Project No: 7311

Sample Number	Collected Date	Time By	Received	Matrix Code	Type	Client Sample ID
JB27829-1	02/01/13	10:00 JSW	02/01/13	SO	Soil	TP8-4.0
JB27829-2	02/01/13	12:00 JSW	02/01/13	SO	Soil	TP9-4.0
JB27829-3	02/01/13	15:50 JSW	02/01/13	SO	Soil	TP11-4.5

Soil samples reported on a dry weight basis unless otherwise indicated on result page.

CASE NARRATIVE / CONFORMANCE SUMMARY

Client: KEM Partners, Inc.

Job No JB27829

Site: Anderson Phase II

Report Date 2/19/2013 6:16:32 PM

On 02/01/2013, 3 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a temperature of 1.8 C. Samples were intact and chemically preserved, unless noted below. An Accutest Job Number of JB27829 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: SO **Batch ID:** VV5716

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB28392-4MS, JB28407-1DUP were used as the QC samples indicated.
- RPD(s) for Duplicate for Tetrachloroethene are outside control limits for sample JB28407-1DUP. High RPD due to low concentration of hit

Matrix: SO **Batch ID:** VX5772

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB27838-3MS, JB27838-1DUP were used as the QC samples indicated.
- RPD(s) for Duplicate for Isopropylbenzene are outside control limits for sample JB27838-1DUP. High RPD due to low concentration of hit

Extractables by GCMS By Method SW846 8270D

Matrix: SO **Batch ID:** OP63506

- All samples were extracted within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB27801-1MS, JB27801-1MSD were used as the QC samples indicated.
- JB27829-1: Dilution required due to matrix interference.

Extractables by GC By Method SW846 8082A

Matrix: SO **Batch ID:** OP63344

- All samples were extracted within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB27533-1MS, JB27533-1MSD were used as the QC samples indicated.

Metals By Method SW846 6010C

Matrix: SO**Batch ID:** MP69616

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB27946-1MS, JB27946-1MSD, JB27946-1SDL were used as the QC samples for metals.
- Matrix Spike Recovery(s) for Zinc are outside control limits. Spike recovery indicates possible matrix interference and/or sample nonhomogeneity.
- Matrix Spike Duplicate Recovery(s) for Antimony, Zinc are outside control limits. Spike recovery indicates possible matrix interference and/or sample nonhomogeneity.
- RPD(s) for Serial Dilution for Antimony, Arsenic, Beryllium, Silver, Thallium are outside control limits for sample MP69616-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Metals By Method SW846 7471B

Matrix: SO**Batch ID:** MP69609

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB27829-2MS, JB27829-2MSD were used as the QC samples for metals.

Wet Chemistry By Method SM2540 G-97

Matrix: SO**Batch ID:** GN79527

- The data for SM2540 G-97 meets quality control requirements.

Wet Chemistry By Method SW846 9012 M/LACHAT

Matrix: SO**Batch ID:** GP69894

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB27694-1AMS, JB27694-1ADUP were used as the QC samples for Cyanide.
- RPD(s) for Duplicate for Cyanide are outside control limits for sample GP69894-D1. RPD acceptable due to low duplicate and sample concentrations.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

Technical Report for

KEM Partners, Inc.

Anderson Phase II

7311

Accutest Job Number: JB27970

Sampling Date: 02/04/13

Report to:

KEM Partners, Inc.
835 Springdale Drive Suite 200
Exton, PA 19341
SWiswall@KemPartners.com

ATTN: Stuart Wiswall

Total number of pages in report: **544**

Test results contained within this data package meet the requirements of the National Environmental Laboratory Accreditation Conference and/or state specific certification programs as applicable.

Nancy Cole
Laboratory Director

Client Service contact: Kristin Beebe 732-329-0200

Certifications: NJ(12129), NY(10983), CA, CT, DE, FL, IL, IN, KS, KY, LA, MA, MD, MI, MT, NC, OH VAP (CL0056), PA, RI, SC, TN, VA, WV

This report shall not be reproduced, except in its entirety, without the written approval of Accutest Laboratories.
Test results relate only to samples analyzed.

Sample Summary

KEM Partners, Inc.

Job No: JB27970

Anderson Phase II
Project No: 7311

Sample Number	Collected Date	Time By	Received	Matrix Code	Type	Client Sample ID
JB27970-1	02/04/13	09:30 JW	02/04/13	SO	Soil	TP12-8.0
JB27970-2	02/04/13	11:50 JW	02/04/13	SO	Soil	TP14-5.0
JB27970-3	02/04/13	14:52 JW	02/04/13	SO	Soil	TP16-7.5

Soil samples reported on a dry weight basis unless otherwise indicated on result page.

CASE NARRATIVE / CONFORMANCE SUMMARY

Client: KEM Partners, Inc.

Job No JB27970

Site: Anderson Phase II

Report Date 2/22/2013 1:08:01 PM

On 02/04/2013, 3 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a temperature of 3.5 C. Samples were intact and chemically preserved, unless noted below. An Accutest Job Number of JB27970 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: SO

Batch ID: VA7209

- All samples were analyzed within the recommended method holding time.
- Sample(s) JB28334-11MS, JB28334-11MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

Matrix: SO

Batch ID: VE8788

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB28538-22MS, JB28538-22MSD were used as the QC samples indicated.
- Matrix Spike Recovery(s) for Methylcyclohexane are outside control limits. Outside control limits due to matrix interference.
- Matrix Spike Duplicate Recovery(s) for Methylcyclohexane are outside control limits. Outside control limits due to matrix interference.
- JB27970-1: Dilution required due to matrix interference.

Extractables by GCMS By Method SW846 8270D

Matrix: SO

Batch ID: OP63536

- All samples were extracted within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB28392-1MS, JB28392-1MSD were used as the QC samples indicated.

Extractables by GC By Method SW846 8082A

Matrix: SO

Batch ID: OP63456

- All samples were extracted within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB28050-1MS, JB28050-1MSD were used as the QC samples indicated.
- Sample(s) JB27970-2, JB27970-3 have surrogates outside control limits.
- JB27970-2 for Tetrachloro-m-xylene: Outside control limits due to matrix interference.
- JB27970-2 for Decachlorobiphenyl: Outside control limits due to matrix interference.
- JB27970-3 for Decachlorobiphenyl: Outside control limits due to matrix interference.

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	This flag indicates the presumptive evidence of a compound.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments

No additional comments.

Receipt

The samples were received on 2/22/2021 11:20 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.5° C.

GC/MS Semi VOA

Method 8270E: The continuing calibration verification (CCV) analyzed in batch 460-760619 was outside the method criteria for the following analyte(s): < Pentachlorophenol and Benzaldehyde>. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Login Sample Receipt Checklist

Client: RT Environmental Services, Inc.

Job Number: 460-228548-1

Login Number: 228548

List Source: Eurofins TestAmerica, Edison

List Number: 1

Creator: Lysy, Susan

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	1354209
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A

FIELD ACTIVITY LOG

FILE

Client: <i>Jim Anderson</i>	Project #: <i>70471-01</i>	Initials: <i>PL</i>
Job Location: <i>Phila PA</i>	Date: <i>6/17/03</i>	Weather: <i>Sunny</i>
Site Address:		
Equipment:		
Equipment Calibration: Model:		
PID: Gas/Lot#:	Gas ppm=	Instrument ppm=
H & S: Hospital Name:		
Location:	Number:	
Police:	Number:	
Explosive Atmosphere/Conditions:		Yes No
Utility Clearance	Client Approval:	
Serial #	(On-Site Utilities)	Name Date/Time
Drums on Site: No	Yes	Soil Pile: No Yes/Size

FIELD ACTIVITY: *TEST PIT INVESTIGATION*

8:30 MEET WITH GRS, LIZ-TRILLIUM DISCUSS ACTIVITIES

8:54 BEGIN TEST PIT 1 IN AREA OF SB-10 (FIG 10) PART 5' of APPROX 9' OF HISTORICAL FILL BRICK, CINDER, LAYER OF CONCRETE APPROX 5' 4" THICK, SANDY MATERIAL AT 10-11', CLAY + WATER AT 12-12.5

9:30 COLLECT TP-1 5-1 (APPROX 5' CINDER MATERIAL)

9:32 COLLECT TP-1 5-2 (APPROX 12' SANDY WET MATERIAL), BACKFILL EXCAVATION

9:50 BEGIN TEST PIT 2 IN AREA OF SB-8, WATER AT APPROX. 5', ALL FILL MATERIAL ON TOP LARGE PIECES OF CONCRETE THE FURTHER DOWN WE EXCAVATE

10:02 COLLECT TP-2 5-3 (FROM APPROX 4', ~~FROM~~ GW INTERFACE) BACKFILL EXCAVATION

10:30 BEGIN TEST PIT 3 IN AREA OF SB-1, INTERMITTENT LAYERS OF BROWN SOIL BETWEEN GREY CINDER, BRICK, RR TIES, OBSTRUCTION AT APPROX 3', MOVE BACK AND CONTINUE EXCAVATION, SMALL TRICKLE OF WATER INFILTRATION AT APPROX 2.5'

11:08 COLLECT TP-3 5-4 3'

11:14 COLLECT TP-3 5-5 11.5' (GW Interface), BACKFILL EXCAVATION

12:35 BEGIN TEST PIT 4 IN AREA BETWEEN TWO LARGE MOUNDS, EXCAVATION - SOIL WITH 2-3" STONE, NO BRICK, BACK OF EXCAVATION CONCRETE FOUNDATION, WATER INFILTRATION 8'

12:52 COLLECT TP-4 5-6 3'

12:54 COLLECT TP-4 5-7 8' (GW Interface) BACKFILL EXCAVATION

1:10 BEGIN TEST PIT 5, LIGHT TAN AND BROWN SOIL TO 2' WITH BRICK, ROCK + CONCRETE TO 8' 8' WOOD PLATFORM, WATER UNDER PLATFORM

1:35 COLLECT TP-5 5-8 1'

1:37 COLLECT TP-5 5-9 GW INTERFACE 7.5'

1:44 BEGIN TEST PIT 6, DARK BROWN SOIL WITH METAL, ROCK, CONCRETE, WOOD, BRICK, MOST DEBRIS

FIELD ACTIVITY: TEST PIT INVESTIGATION

8:45 BEGIN TEST PIT 8, STANDING WATER FLOWING INTO EXCAVATION, MOVE BACK 50' TO HIGHER GROUND, RESUME TEST PIT & EXCAVATION, BROWN SOIL WITH BRICK, WOOD, (WATER INFILTRATION AT APPROX 2') CONCRETE, METAL

9:05 BACKHOLE DOWN, TRY TO REPAIR IN FIELD, HERO FROM ANDERSON CONSTRUCTION UNIT, HAS ANOTHER BACKHOLE EN ROUTE

10:05 BACKHOLE REPAIRED, CONTINUE EXCAVATION, MORE DEBRIS IN BOTTOM PORTION OF EXCAVATION, METAL, ROCK, CONCRETE, PLASTIC METAL CABLE, WATER AT 10'

10:27 COLLECT TP-8 S-14 3'

10:25 COLLECT TP-8 S-15 (FROM TOP OF DEBRIS PILE HIGHLY MIXED, BLACK MATERIAL, SHEEN) PID 8.6

10:40 BEGIN TEST PIT 9, BROWN SOIL W/ BRICK, NOT A LOT OF DEBRIS, -DRIVE ROCKS + CONCRETE AT APPROX 10', GREY CLAY LAYER APPROX 11' SOME WATER FROM ABOVE THAT, CONCRETE FOUNDATION, ONLY SMALL AMOUNT OF WATER AT 8' NOT REACH WATER AT BOTTOM, 13'

11:15 COLLECT TP-9 S-16 3'

11:18 COLLECT TP-9 S-17 (FROM BETWEEN CONCRETE FOUNDATION - 13') BACKFILL EXCAVATION

11:35 BEGIN TEST PIT 10, VERY SMALL DEBRIS AT VERY SHALLOW INTERVAL, CONCRETE, METAL CABLE, GLASS, 1/2 DRUM BRICK, NINE, TEXTILES, SMALL AMOUNT OF WATER INFILTRATION AT APPROX 3', 6' Black GRAVELLY SOIL w/ small rock, WATER AT 14'

12:11 COLLECT TP-10 S-18 3'

12:14 COLLECT TP-10 S-19 13.5' (GW INTERFACE) SLIGHT SCHEEN, BACKFILL EXCAVATION

12:30 BEGIN TEST PIT 11, DARK BROWN SOIL WITH COBBLE STONES + RIVER ROCK, WOOD, SMALL AMOUNT OF BRICK, MORE BRICK AT APPROX 9', ALSO, ROCK AND CONCRETE, AT 12' THICK DRILL LAYER, UNDER BRICK, LARGE ROCKS (ORIGINAL BACKHEAD MATERIAL) WATER

1:41 COLLECT TP-11 S-20 3'

**RT ENVIRONMENTAL SERVICES, INC.
FIELD ACTIVITY LOG**

Client: Anderson - Drott St.		Project #: 70588-09	Initials: TB
Job Location: Phila, PA		Date: 7/5/06	Weather: Rain TO
Site Address:			
Equipment:			
Equipment Calibration: Model:			
PID: Gas/Lot#:		Gas ppm=	Instrument ppm=
H & S: Hospital Name:			
Location:		Number:	
Police:		Number:	
Explosive Atmosphere/Conditions:			Yes No
Utility Clearance		Client Approval:	
Serial #	(On-Site Utilities)	Name	Date/Time
Drums on Site: No	Yes	Soil Pile: No	Yes/Size
FIELD ACTIVITY: Test Pit Investigation			
7 ⁰⁰ RT onsite			
Dig small trench on Columbus Blvd. → find fill, nothing unusual (No sample collected)			
Begin test pits on Drott St.			
TP-1 (see map) find fill (brick, concrete, coal ash, debris) w/ petro odor at 5' bgs (PID not working because of Rain) → gw observed at 8' bgs, sample collected (TP-1(8))			
TP-2 - same as TP-1 (fill material) w/ strong petro odor at 10' → gw at 10' bgs ? sample collected (TP-2(10))			
TP-3 - same fill material down to 5' bgs where gw is observed (No petro odor) sample collected (TP-3(5))			
TP-4 - same fill material and debris to gw at 4' bgs (No petro odor) sample collected (TP-4(4))			
TP-5 - same fill material to gw at 5' bgs w/ a lot of debris (trash) sample collected (TP-5(5))			
TP-6 - same fill material w/ a lot of rebar ? concrete down to 3' bgs → gw at 5' sample collected (TP-6(5))			
TP-7 - same fill material as before w/ first petro odor to gw at 7' bgs - sample collected (TP-7(7))			
TP-8 - same fill material w/ strong petro odor down to 9' bgs at gw → a lot of garbage ? municipal debris → sample collected at 9' (TP-8(9))			
TP-9 same fill material w/ a stone ? tan road at 3' bgs - a lot of debris ? garbage to gw at 12' bgs → sample collected at 12' (TP-9(12))			
TP-10 same fill material down to 12' bgs at gw → not as much debris (No petro odor) sampled (TP-10(12))			
TP-11 same fill material w/ considerable amount of garbage (debris) to gw at 12' bgs sampled (TP-11(12))			
TP-12 same fill material w/ a lot of concrete ? stone (No petro odor) to gw at 12' bgs sampled (TP-12(12))			
TP-13 same fill material w/ some concrete ? debris to gw at 11' bgs sampled (TP-13(11))			
→ No petroleum product observed in any test pits			
- samples taken to laboratory			
3 ⁴⁵ RT off site

**RT ENVIRONMENTAL SERVICES, INC.
FIELD ACTIVITY LOG**

Client:	Project #:	Initials:
Job Location:	Date:	Weather:
Site Address:		
Equipment:		

FIELD ACTIVITY:

TP-100
In former TP-5(1)
Brown soil w/ Brick & Concrete
Sampled at 1-1.5' TP-100(1)
 3-3.5' TP-100(3)
 6-6.5' TP-100(6)
GWL at 6.5'
Some fill material at 3-4'
Metal: some rock

TP-101
In former TP-4
Brown soil w/ black fill
Metal: concrete throughout
Sampled at 1.5-2' TP-101(2)
 3.5-4' TP-101(4)
 5.5-6' TP-101(6)
GWL at 6'

TP-102
Brown soil w/ fill material throughout
Blue substance at 2-2.5'
Sampled at 2-2.5' TP-102(2)
 5-5.5' TP-102(5)
GWL at 6'

TP-103
Black fill 0-5'
Concrete, glass, brick
Sampled at 1.5-2' TP-103(2)
 5.5-6' TP-103(6)
GWL at 5.5'

TP-104
Concrete, municipal waste
brick, coal ash throughout
Sampled at 1-1.5' TP-104(1)
 3-3.5' TP-104(3)
 5-5.5' TP-104(5)
GWL at 6'

TP-105
Same fill throughout
Blue-green (dark) clay soil at 4-6'
Sampled at 1.5-2' TP-105(2)
 5.5-6' TP-105(6)
GWL at 6'

TP-106
Coal Ash-concrete, brick
waste materials, lumber
Some clay soils at 3'
Sampled at 1-1.5' TP-106(1)
 3-3.5' TP-106(3)
 5-5.5' TP-106(5)
GWL at 6'

TP-107
Fill material - some
white substance w/ slag
at 5-6'
Sampled at 2-2.5' TP-107(2)
 5-5.5' TP-107(5)
GWL at 6'

TP-108
Fill Material 0-8'
8'-12' Petroleum odor
stained clay soil (black)
↳ No fill No PID
No GWL at 12' - stop digging
Sampled at 1-1.5' TP-108(1)
 4-4.5' TP-108(4)
 6-6.5' TP-108(6)
 12-12.5' TP-108(12)

FIELD ACTIVITY:

TP-111 In area of forms TP-10
 Fill material throughout
 Gray ash & rock 8'-12'
 No GW down to 12'
 Sampled at 1.5-2' TP-111(2)
 8" 4-4.5' TP-111(4)
 6-6.5' TP-111(6)
 11-11.5' TP-111(11)

TP-112
 Fill - Gray ash w/ rock 7'-12'
 GW at 12.5'
 Sampled at 1-1.5' TP-112(1)
 9" 3-3.5' TP-112(3)
 5-5.5' TP-112(5)
 12-12.5' TP-112(12)
 Lots of concrete & granite curbs
 Brick, metal pipes

TP-113
 Fill - Large pieces of concrete 3-7'
 Black to gray ash 5'-8'
 Sampled at 1.5-2' TP-113(2)
 10" 5-5.5' TP-113(6)
 10-10.5' TP-113(10)
 GW at 12'

TP-114
 Fill - metal - concrete, ash
 Large pieces of brick
 Petroleum (separate phase) at 11'-12'
 No PID
 Sampled at 1.5-2' TP-114(2)
 12" 5-5.5' TP-114(5)
 9-9.5' TP-114(9)
 11-11.5' TP-114(11)
 GW at 12.5'

TP-115
 Fill - Large piece of concrete at 9-10'
 Black coal ash w/ brick
 Sampled at 1-1.5' TP-115(1)
 12" 6-6.5' TP-115(6)
 10-10.5' TP-115(10)
 GW at 11.5'

TP-116
 Fill - Layer of scrap metal & municipal waste
 at 5-6'
 Concrete, rebar, brick
 Sampled at 1.5-2' TP-116(2)
 13" 4.5-5' TP-116(5)
 10-10.5' TP-116(10)
 GW at 11'

TP-117 1400
 Fill - Not as much concrete
 brick, pipes, waste
 Sampled at 1-1.5' TP-117(1)
 3-3.5' TP-117(3)
 6-6.5' TP-117(6)
 10-10.5' TP-117(10)
 GW at 11.5'

Client: Anderson Construction	Project #: 70588-16	Initials: JA
Job Location: Dyott St. Parcel	Date: 3/28/08	Weather: clouds SO-CO
Site Address: Riverfront - Phila, PA		
Equipment:		
Equipment Calibration: Model:		
PID: Gas/Lot#:	Gas ppm=	Instrument ppm=
H & S: Hospital Name:		
Location:		Number:
Police:		Number:
Explosive Atmosphere/Conditions:		Yes No
Utility Clearance	Client Approval:	
Serial #	(On-Site Utilities)	Name Date/Time
Drums on Site: No	Yes	Soil Pile: No Yes/Size
FIELD ACTIVITY: Surface Soil Sampling		
Begin collecting surface soil samples in random spots on property — see map for specific locations		
All samples collected from 0 to 2 foot interval using a hand trowel Trowel was decontaminated between each sample location		
A total of 8 surface soil samples collected on Dyott Parcel		
Submitted to laboratory for analysis of RCRA-8, PCB, & PAH		
Comments:

FIELD ACTIVITY LOG

Client: Anderson Construction		Project #: 70588-13	Initials: TD	
Job Location: Riverfront - PCB		Date: 10/18 - 10/19/07	Weather: hazy / drizzle 70-80	
Site Address: 2015 Richmond St., Phila, PA				
Equipment:				
Equipment Calibration: Model:				
PID: Gas/Lot#:		Gas ppm=	Instrument ppm=	
H & S: Hospital Name:				
Location:		Number:		
Police:		Number:		
Explosive Atmosphere/Conditions:		Yes	No	
Utility Clearance		Client Approval:		
Serial #	(On-Site Utilities)		Name	Date/Time
Drums on Site:	No	Yes	Soil Pile:	No Yes/Size
FIELD ACTIVITY: PCB Soil Delineation				
Oct. 18, 2007				
RT onsite at 10 ⁰⁰ w/ Anderson Construction				
Begin excavating test pits in Area 1 → see attached sample location map				
See Test Pit Logs for soils descriptions & sample points				
All samples taken above water table and unsaturated				
RT concludes first day of test pits - offsite at 15 ³⁰				
Oct. 19, 2007				
RT onsite at 7 ⁰⁰ w/ Anderson Construction				
Continue w/ PCB delineation				
→ see attached logs & sample maps				
Soil delineation completed at 14 ³⁰				
All samples transported to laboratory.				
Attach: COC, Test Pit Logs, SLM				
Comments:

Proj. # 70588-13	Proj. Name: Riverfront PCB Delineation	Geologist: TD
Boring#: TP-	Elevation:	Operator: Anderson Const.
Permit #: NA	Method: Backhoe	Page 1 of 1
Start Date: October 18, 2007	End Date: October 19, 2007	

Depth (ft)	Sample Type & #	Description	PID	Remarks
1/2		0-13' Fill Material		
1				
1 1/2		A lot of coal ash, concrete		
2		lumber, metal debris		
2 1/2				
3		some municipal waste		
3 1/2				
4				
4 1/2		No groundwater at 13' bgs		
5		- soil moist at 13'		
5 1/2				
6		No odor		
6 1/2				
7		Sampled at 1.5'-2'		
7 1/2		5.5'-6'		
8		12.5'-13'		
8 1/2

Test Pit ID	Total Depth	Sample Depth	Depth-to-Water	Description	PID
TP-14	9	5.0	8	0 - 1.5 Tan/brown silty coarse to fine Sand, river rock. 1.5 - 8 Black/brown silty Sand with asphalt, metal, brick, ceramic. 8 Black seam with slight oil odor. Water entering pit. No sheen.	0 0 2.8
TP-15	9	None	NE	0 - 4 Tan/brown silty coarse to fine Sand. Wire in metal conduit at 0.5 foot. 4 - 5 Black asphalt pavement with gravel sub base. 5-8 Tan/brown fine sandy Silt. 8 - 9 Black/brown to grey silty coarse to fine Sand with rock. 9 - Wood planks perpendicular to river. Planks not penetrated, but apparent void below planks.	0 0
TP-16	11	7.5	11	0 - 4 Tan/brown silty coarse to fine Sand with frequent rock, river rock, concrete. 4 - 10 Dark brown to grey silty coarse to fine Sand with rock, brick, metals, wire, glass. 10 - 11 Grey sandy Silt, wet, collapsing walls.	0 3.5 0
TP-17	12	None	11.5	0 - 5 Tan/brown silty micaceous coarse to fine Sand with frequent rocks. 5 - 9 Dark grey to brown silty coarse to fine Sand with rock, brick, glass. 9 - 11 Brown to black silty coarse to fine Sand with brick. 11 - 12 Tan/yellow weathered concrete. Water at 11.5 feet - no odor or sheen.	0 0 0 0
TP-18	13	None	12.5	0 - 1.5 Brown sandy Silt. 1.5 - 3 Tan/brown silty coarse to fine Sand with brick, plastic, concrete foundation. 3 - 5 Tan/yellow very micaceous fine sandy silt. Vertical concrete wall in west wall of pit to 5 feet with timbers below. 5 - 13 Grey/brown sandy Silt, trace clay with large (18x22 inches) timber at 6 ft., additional timbers at 11 feet. Water at 12.5 ft. - no odor or sheen.	0 0 0

Appendix D – PNDI and ECS Ecological Assessment Report

1. PROJECT INFORMATION

Project Name: **Beach St**

Date of Review: **10/18/2018 04:58:56 PM**

Project Category: **Hazardous Waste Clean-up, Site Remediation, and Reclamation, Other**

Project Area: **39.50 acres**

County(s): **Philadelphia**

Township/Municipality(s): **PHILADELPHIA**

ZIP Code: **19125**

Quadrangle Name(s): **CAMDEN**

Watersheds HUC 8: **Lower Delaware**

Watersheds HUC 12: **Petty Island-Delaware River**

Decimal Degrees: **39.970820, -75.118412**

Degrees Minutes Seconds: **39° 58' 14.9536" N, 75° 7' 6.2814" W**

2. SEARCH RESULTS

Agency	Results	Response
PA Game Commission	No Known Impact	No Further Review Required
PA Department of Conservation and Natural Resources	No Known Impact	No Further Review Required
PA Fish and Boat Commission	Potential Impact	FURTHER REVIEW IS REQUIRED, See Agency Response
U.S. Fish and Wildlife Service	No Known Impact	No Further Review Required

As summarized above, Pennsylvania Natural Diversity Inventory (PNDI) records indicate there may be potential impacts to threatened and endangered and/or special concern species and resources within the project area. If the response above indicates "No Further Review Required" no additional communication with the respective agency is required. If the response is "Further Review Required" or "See Agency Response," refer to the appropriate agency comments below. Please see the DEP Information Section of this receipt if a PA Department of Environmental Protection Permit is required.

3. AGENCY COMMENTS

Regardless of whether a DEP permit is necessary for this proposed project, any potential impacts to threatened and endangered species and/or special concern species and resources must be resolved with the appropriate jurisdictional agency. In some cases, a permit or authorization from the jurisdictional agency may be needed if adverse impacts to these species and habitats cannot be avoided.

These agency determinations and responses are **valid for two years** (from the date of the review), and are based on the project information that was provided, including the exact project location; the project type, description, and features; and any responses to questions that were generated during this search. If any of the following change: 1) project location, 2) project size or configuration, 3) project type, or 4) responses to the questions that were asked during the online review, the results of this review are not valid, and the review must be searched again via the PNDI Environmental Review Tool and resubmitted to the jurisdictional agencies. The PNDI tool is a primary screening tool, and a desktop review may reveal more or fewer impacts than what is listed on this PNDI receipt. The jurisdictional agencies **strongly advise against** conducting surveys for the species listed on the receipt prior to consultation with the agencies.

PA Game Commission

RESPONSE:

No Impact is anticipated to threatened and endangered species and/or special concern species and resources.

PA Department of Conservation and Natural Resources

RESPONSE:

No Impact is anticipated to threatened and endangered species and/or special concern species and resources.

PA Fish and Boat Commission

RESPONSE:

Further review of this project is necessary to resolve the potential impact(s). Please send project information to this agency for review (see WHAT TO SEND).

PFBC Species: (Note: The Pennsylvania Conservation Explorer tool is a primary screening tool, and a desktop review may reveal more or fewer species than what is listed below.)

Scientific Name	Common Name	Current Status
Sensitive Species**		Endangered
Sensitive Species**		Endangered
Sensitive Species**		Threatened

U.S. Fish and Wildlife Service

RESPONSE:

No impacts to **federally** listed or proposed species are anticipated. Therefore, no further consultation/coordination under the Endangered Species Act (87 Stat. 884, as amended; 16 U.S.C. 1531 et seq. is required. Because no take of federally listed species is anticipated, none is authorized. This response does not reflect potential Fish and Wildlife Service concerns under the Fish and Wildlife Coordination Act or other authorities.

* Special Concern Species or Resource - Plant or animal species classified as rare, tentatively undetermined or candidate as well as other taxa of conservation concern, significant natural communities, special concern populations (plants or animals) and unique geologic features.

** Sensitive Species - Species identified by the jurisdictional agency as collectible, having economic value, or being susceptible to decline as a result of visitation.

WHAT TO SEND TO JURISDICTIONAL AGENCIES

If project information was requested by one or more of the agencies above, upload* or email* the following information to the agency(s). Instructions for uploading project materials can be found [here](#). This option provides the applicant with the convenience of sending project materials to a single location accessible to all three state agencies. Alternatively, applicants may email or mail their project materials (see AGENCY CONTACT INFORMATION).

***Note:** U.S.Fish and Wildlife Service requires applicants to mail project materials to the USFWS PA field office (see AGENCY CONTACT INFORMATION). USFWS will not accept project materials submitted electronically (by upload or email).

Check-list of Minimum Materials to be submitted:

___ Project narrative with a description of the overall project, the work to be performed, current physical characteristics of the site and acreage to be impacted.

___ A map with the project boundary and/or a basic site plan (particularly showing the relationship of the project to the physical features such as wetlands, streams, ponds, rock outcrops, etc.)

In addition to the materials listed above, USFWS REQUIRES the following

___ **SIGNED** copy of a Final Project Environmental Review Receipt

The inclusion of the following information may expedite the review process.

___ Color photos keyed to the basic site plan (i.e. showing on the site plan where and in what direction each photo was taken and the date of the photos)

___ Information about the presence and location of wetlands in the project area, and how this was determined (e.g., by a qualified wetlands biologist), if wetlands are present in the project area, provide project plans showing the location of all project features, as well as wetlands and streams.

4. DEP INFORMATION

The Pa Department of Environmental Protection (DEP) requires that a signed copy of this receipt, along with any required documentation from jurisdictional agencies concerning resolution of potential impacts, be submitted with applications for permits requiring PNDI review. Two review options are available to permit applicants for handling PNDI coordination in conjunction with DEP's permit review process involving either T&E Species or species of special concern. Under sequential review, the permit applicant performs a PNDI screening and completes all coordination with the appropriate jurisdictional agencies prior to submitting the permit application. The applicant will include with its application, both a PNDI receipt and/or a clearance letter from the jurisdictional agency if the PNDI Receipt shows a Potential Impact to a species or the applicant chooses to obtain letters directly from the jurisdictional agencies. Under concurrent review, DEP, where feasible, will allow technical review of the permit to occur concurrently with the T&E species consultation with the jurisdictional agency. The applicant must still supply a copy of the PNDI Receipt with its permit application. The PNDI Receipt should also be submitted to the appropriate agency according to directions on the PNDI Receipt. The applicant and the jurisdictional agency will work together to resolve the potential impact(s). See the DEP PNDI policy at <https://conservationexplorer.dcnr.pa.gov/content/resources>.

5. ADDITIONAL INFORMATION

The PNDI environmental review website is a preliminary screening tool. There are often delays in updating species status classifications. Because the proposed status represents the best available information regarding the conservation status of the species, state jurisdictional agency staff give the proposed statuses at least the same consideration as the current legal status. If surveys or further information reveal that a threatened and endangered and/or special concern species and resources exist in your project area, contact the appropriate jurisdictional agency/agencies immediately to identify and resolve any impacts.

For a list of species known to occur in the county where your project is located, please see the species lists by county found on the PA Natural Heritage Program (PNHP) home page (www.naturalheritage.state.pa.us). Also note that the PNDI Environmental Review Tool only contains information about species occurrences that have actually been reported to the PNHP.

**RE: Species Impact Review (SIR) – Rare, Candidate, Threatened and Endangered Species
PNDI Search No. 668647_1
Beach Street
PHILADELPHIA County: Philadelphia City**

Dear Craig Herr:

This responds to your inquiry about a Pennsylvania Natural Diversity Inventory (PNDI) Internet Database search “potential conflict” or a threatened and endangered species impact review. These projects are screened for potential conflicts with rare, candidate, threatened or endangered species under Pennsylvania Fish & Boat Commission jurisdiction (fish, reptiles, amphibians, aquatic invertebrates only) using the Pennsylvania Natural Diversity Inventory (PNDI) database and our own files. These species of special concern are listed under the Endangered Species Act of 1973, the Wild Resource Conservation Act, and the Pennsylvania Fish & Boat Code (Chapter 75), or the Wildlife Code.

Per my request, you supplied additional information regarding the project. According to the additional information, the current project activities should not impact Atlantic Sturgeon (*Acipenser oxyrinchus*), Shortnose Sturgeon (*Acipenser brevirostrum*) and Eastern Redbelly Turtle (*Pseudemys rubriventris*). Therefore, I do not foresee the proposed project resulting in adverse impacts to these species of special concern.

This response represents the most up-to-date summary of the PNDI data and our files and is valid for two (2) years from the date of this letter. An absence of recorded species information does not necessarily imply species absence. Our data files and the PNDI system are continuously being updated with species occurrence information. Should project plans change or additional information on listed or proposed species become available, this determination may be reconsidered, and consultation shall be re-initiated.

Our Mission:

www.fish.state.pa.us

To protect, conserve and enhance the Commonwealth's aquatic resources and provide fishing and boating opportunities.

If you have any questions regarding this review, please contact Sean Hartzell at sehartzell@pa.gov or 814-359-5239 and refer to the SIR # 50275. Thank you for your cooperation and attention to this important matter of species conservation and habitat protection.

Sincerely,

A handwritten signature in black ink that reads "Christopher A. Urban". The signature is written in a cursive style with a large initial "C" and "U".

ECS Project No. 47-7006

*Reference: Cramp Shipyard Ecological Assessment
Richmond and Beach Streets
Philadelphia, Pennsylvania*

Dear Mr. Herr:

ECS Mid-Atlantic, LLC (ECS) is pleased to present you with the results of our ecological assessment performed for the above-referenced property. Our credentials to perform this assessment are attached.

The project site is located at 2001 Richmond Street and 2005 Richmond Street, in the City of Philadelphia, Pennsylvania. (Figure 1). The site is the former William Cramp & Sons Ship and Engine Building Company and is comprised of unimproved land along the Delaware River.

ECS was tasked to perform a site-specific ecological assessment of the site in connection with the preparation of an Act 2 Report for groundwater. An ECS Biologist visited the site on October 9, 2018. The site is an unimproved site that consists of open meadow and early successional forest dominated by staghorn sumac. Approximately 3,000 feet of the site abuts the Delaware River. Much of the river frontage was manipulated by dry docks and sheet piling with other evidence of past industrial use still evident. Species observed during the site reconnaissance included grey squirrel, common crow, mourning dove, and pigeon, common for this location.

A PNDI search identified the following species of ecological concern as potentially present at the site: short-nose and Atlantic sturgeons, bald eagle, and red-bellied turtle. ECS provides the following commentary associated with the potential for suitable habitat to be present on the subject site for these species.

Short-nose and Atlantic Sturgeon (*Acipenser spp.*)

The short-nose and Atlantic sturgeons are known to inhabit large tidal river systems. Adult sturgeon spawn in clean gravel in freshwater but can live in either fresh or salt water. Sturgeon are known to reside in the Delaware River and are likely to travel through this area to spawn and forage, although likely spawning habitat is not found in the project area. The adjoining shoreline of the subject site is primarily comprised of armored loading dock and filled areas, which do not provide suitable habitat for this species. Diffuse groundwater discharge from the site has been determined to meet surface water criteria protective of ecological receptors and would therefore not be expected to impact this species.

Bald Eagle (*Haliaeetus leucocephalus*)

The bald eagle is a large bird of prey that lives near open bodies of water and old-growth forests. Bald eagles are likely to forage along and in the Delaware River, but no roosting or nesting sites (i.e. large trees overlooking the River) were observed on the subject property which limits the bald eagles use of the subject property. No bald eagles were observed in the area at the time of our visit. Accordingly, there does not appear to be suitable bald eagle habitat on the subject site.

Red-Bellied Turtle (*Pseudemys rubiventris*)

The red-bellied turtle is known to inhabit lakes, rivers, and wetlands in the coastal areas of New Jersey, Pennsylvania, Maryland, Virginia, and North Carolina. Populations of red-bellied turtles are known to inhabit both the Schuylkill and the Delaware Rivers. Red-bellied turtles prefer open water systems that have large woody debris for basking habitat. Concrete and other fill debris were observed along the site's shoreline which could be suitable for basking turtles in some lower lying locations. Other areas of the site that are armored ship docking areas would not be considered suitable basking habitat. As a result, the site contains only marginal basking habitat and no turtles were observed on the site at the time of our site visit. Diffuse groundwater discharge from the site meets surface water criteria protective of ecological receptors and is therefore not expected to adversely affect the quality of the marginal basking habitat.

A letter from the Pennsylvania Fish and Boat Commission dated October 30, 2018 (copy attached) concluded that there would be no adverse impact to the identified species from the soil conditions at the site presented in the Act 2 Report. Based on its evaluation of the subject site, ECS concurs with the findings of the Pennsylvania Fish & Boat Commission.

Respectfully submitted,

ECS Mid-Atlantic, LLC

2. SEARCH RESULTS

Agency	Results	Response
PA Game Commission	No Known Impact	No Further Review Required
PA Department of Conservation and Natural Resources	No Known Impact	No Further Review Required
PA Fish and Boat Commission	Potential Impact	FURTHER REVIEW IS REQUIRED, See Agency Response
U.S. Fish and Wildlife Service	No Known Impact	No Further Review Required

As summarized above, Pennsylvania Natural Diversity Inventory (PNDI) records indicate there may be potential impacts to threatened and endangered and/or special concern species and resources within the project area. If the response above indicates "No Further Review Required" no additional communication with the respective agency is required. If the response is "Further Review Required" or "See Agency Response," refer to the appropriate agency comments below. Please see the DEP Information Section of this receipt if a PA Department of Environmental Protection Permit is required.

3. AGENCY COMMENTS

Regardless of whether a DEP permit is necessary for this proposed project, any potential impacts to threatened and endangered species and/or special concern species and resources must be resolved with the appropriate jurisdictional agency. In some cases, a permit or authorization from the jurisdictional agency may be needed if adverse impacts to these species and habitats cannot be avoided.

These agency determinations and responses are **valid for two years** (from the date of the review), and are based on the project information that was provided, including the exact project location; the project type, description, and features; and any responses to questions that were generated during this search. If any of the following change: 1) project location, 2) project size or configuration, 3) project type, or 4) responses to the questions that were asked during the online review, the results of this review are not valid, and the review must be searched again via the PNDI Environmental Review Tool and resubmitted to the jurisdictional agencies. The PNDI tool is a primary screening tool, and a desktop review may reveal more or fewer impacts than what is listed on this PNDI receipt. The jurisdictional agencies **strongly advise against** conducting surveys for the species listed on the receipt prior to consultation with the agencies.

PA Game Commission

RESPONSE:

No Impact is anticipated to threatened and endangered species and/or special concern species and resources.

PA Department of Conservation and Natural Resources

RESPONSE:

No Impact is anticipated to threatened and endangered species and/or special concern species and resources.

PA Fish and Boat Commission

RESPONSE:

Further review of this project is necessary to resolve the potential impact(s). Please send project information to this agency for review (see WHAT TO SEND).

PFBC Species: (Note: The Pennsylvania Conservation Explorer tool is a primary screening tool, and a desktop review may reveal more or fewer species than what is listed below.)

Scientific Name	Common Name	Current Status
Sensitive Species**		Endangered
Sensitive Species**		Endangered
Sensitive Species**		Threatened

U.S. Fish and Wildlife Service

RESPONSE:

No impacts to **federally** listed or proposed species are anticipated. Therefore, no further consultation/coordination under the Endangered Species Act (87 Stat. 884, as amended; 16 U.S.C. 1531 et seq. is required. Because no take of federally listed species is anticipated, none is authorized. This response does not reflect potential Fish and Wildlife Service concerns under the Fish and Wildlife Coordination Act or other authorities.

* Special Concern Species or Resource - Plant or animal species classified as rare, tentatively undetermined or candidate as well as other taxa of conservation concern, significant natural communities, special concern populations (plants or animals) and unique geologic features.

** Sensitive Species - Species identified by the jurisdictional agency as collectible, having economic value, or being susceptible to decline as a result of visitation.

WHAT TO SEND TO JURISDICTIONAL AGENCIES

If project information was requested by one or more of the agencies above, upload* or email* the following information to the agency(s). Instructions for uploading project materials can be found [here](#). This option provides the applicant with the convenience of sending project materials to a single location accessible to all three state agencies. Alternatively, applicants may email or mail their project materials (see AGENCY CONTACT INFORMATION).

Check-list of Minimum Materials to be submitted:

___ Project narrative with a description of the overall project, the work to be performed, current physical characteristics of the site and acreage to be impacted.

___ A map with the project boundary and/or a basic site plan (particularly showing the relationship of the project to the physical features such as wetlands, streams, ponds, rock outcrops, etc.)

In addition to the materials listed above, USFWS REQUIRES the following

___ **SIGNED** copy of a Final Project Environmental Review Receipt

The inclusion of the following information may expedite the review process.

___ Color photos keyed to the basic site plan (i.e. showing on the site plan where and in what direction each photo was taken and the date of the photos)

___ Information about the presence and location of wetlands in the project area, and how this was determined (e.g., by a qualified wetlands biologist), if wetlands are present in the project area, provide project plans showing the location of all project features, as well as wetlands and streams.

4. DEP INFORMATION

The Pa Department of Environmental Protection (DEP) requires that a signed copy of this receipt, along with any required documentation from jurisdictional agencies concerning resolution of potential impacts, be submitted with applications for permits requiring PNDI review. Two review options are available to permit applicants for handling PNDI coordination in conjunction with DEP's permit review process involving either T&E Species or species of special concern. Under sequential review, the permit applicant performs a PNDI screening and completes all coordination with the appropriate jurisdictional agencies prior to submitting the permit application. The applicant will include with its application, both a PNDI receipt and/or a clearance letter from the jurisdictional agency if the PNDI Receipt shows a Potential Impact to a species or the applicant chooses to obtain letters directly from the jurisdictional agencies. Under concurrent review, DEP, where feasible, will allow technical review of the permit to occur concurrently with the T&E species consultation with the jurisdictional agency. The applicant must still supply a copy of the PNDI Receipt with its permit application. The PNDI Receipt should also be submitted to the appropriate agency according to directions on the PNDI Receipt. The applicant and the jurisdictional agency will work together to resolve the potential impact(s). See the DEP PNDI policy at <https://conservationexplorer.dcnr.pa.gov/content/resources>.

5. ADDITIONAL INFORMATION

The PNDI environmental review website is a preliminary screening tool. There are often delays in updating species status classifications. Because the proposed status represents the best available information regarding the conservation status of the species, state jurisdictional agency staff give the proposed statuses at least the same consideration as the current legal status. If surveys or further information reveal that a threatened and endangered and/or special concern species and resources exist in your project area, contact the appropriate jurisdictional agency/agencies immediately to identify and resolve any impacts.

For a list of species known to occur in the county where your project is located, please see the species lists by county found on the PA Natural Heritage Program (PNHP) home page (www.naturalheritage.state.pa.us). Also note that the PNDI Environmental Review Tool only contains information about species occurrences that have actually been reported to the PNHP.

**RE: Species Impact Review (SIR) – Rare, Candidate, Threatened and Endangered Species
PNDI Search No. 725494_1
Beach St Act 2 Land Recycling Program Project - Parcels B & C
PHILADELPHIA County: Philadelphia City**

Dear Craig Herr:

This responds to your inquiry about a Pennsylvania Natural Diversity Inventory (PNDI) Internet Database search “potential conflict” or a threatened and endangered species impact review. These projects are screened for potential conflicts with rare, candidate, threatened or endangered species under Pennsylvania Fish & Boat Commission jurisdiction (fish, reptiles, amphibians, aquatic invertebrates only) using the Pennsylvania Natural Diversity Inventory (PNDI) database and our own files. These species of special concern are listed under the Endangered Species Act of 1973, the Wild Resource Conservation Act, and the Pennsylvania Fish & Boat Code (Chapter 75), or the Wildlife Code.

**Atlantic Sturgeon (*Acipenser oxyrinchus*, Endangered)
Shortnose Sturgeon (*Acipenser brevirostrum*, Endangered)
Northern Red-bellied Cooter (*Pseudemys rubriventris*, Threatened)**

If wetlands, vernal pools, the Delaware River, streams, or ponds or the area within 300ft of these water features are to be disturbed from future project activity, we will need to conduct a more thorough evaluation of the potential adverse impacts to the species of concern. Items **such as:** basic project plans, project narrative, general habitat descriptions, and color photographs keyed to a site map or diagram of the project area, wetlands identification and delineation, stream characterization (flow velocity, width, depth, substrate type, pools and riffles, identification of basking areas, logs, woody debris, presence of aquatic vegetation) would expedite our review process. Follow-up information may be uploaded to the PA Conservation Explorer site PNDI project file. Pending the review of information, a habitat assessment or survey targeting the presence of the species of concern may be warranted.

However, if wetlands, vernal pools, or water bodies or the area within 300ft of these water

Our Mission:

www.fish.state.pa.us

To protect, conserve and enhance the Commonwealth's aquatic resources and provide fishing and boating opportunities.

features are not to be disturbed in any way by proposed activities, and provided that best management practices are employed and strict erosion and sedimentation measures are maintained, I do not foresee any adverse impacts to the Atlantic Sturgeon (*Acipenser oxyrinchus*), Shortnose Sturgeon (*Acipenser brevirostrum*) or Northern Red-bellied Cooter (*Pseudemys rubriventris*) from the proposed project.

This response represents the most up-to-date summary of the PNDI data and our files and is valid for two (2) years from the date of this letter. An absence of recorded species information does not necessarily imply species absence. Our data files and the PNDI system are continuously being updated with species occurrence information. Should project plans change or additional information on listed or proposed species become available, this determination may be reconsidered, and consultation shall be re-initiated.

If you have any questions regarding this review, please contact Kathy Gipe at 814-359-5186 and refer to the SIR # 53983. Thank you for your cooperation and attention to this important matter of species conservation and habitat protection.

Sincerely,

A handwritten signature in black ink that reads "Christopher A. Urban". The signature is written in a cursive style with a large, prominent initial "C".

401 City Avenue, Suite 901
Bala Cynwyd, PA 19004

RE: Delaware Riverfront Parcels

Dear Mr. Gold:

This letter is in response to your April 4, 2019 letter and supporting documentation that was provided to the U.S. Environmental Protection Agency Region III (EPA) presenting your determination under 40 C.F.R. §761.50(b)(3)(i)(B) and (iii) regarding the polychlorinated biphenyl (PCB) remediation waste that has been documented as existing at the three adjoining parcels (Parcels A, B and C) located at 2001 Beach Street, 2001 Richmond Street and 2005 Richmond Street in Philadelphia, PA; collectively identified as the Delaware Riverfront Parcels.

The federal Toxic Substances and Control Act (TSCA), 15 U.S.C. Section 2605(e), and EPA implementing regulations at 40 C.F.R. Part 761 impose limitations and requirements for the cleanup and disposal of PCB remediation waste. Section 761.50(b)(3)(i)(B) of the PCB regulations provide that “any person responsible for PCB waste at as-found concentrations greater than or equal to 50 parts per million (ppm) that was either placed in a land disposal facility or otherwise released into the environment prior to April 18, 1978, regardless of the concentration of the spill or release,who unilaterally decides to dispose of that waste (for example, to obtain insurance or to sell the property), is not required to clean up in accordance with 40 C.F.R. §761.61. Disposal of the PCB remediation waste must comply with §761.61. However, cleanup of those wastes that is not in complete compliance with §761.61 will not afford the responsible party with relief from the applicable PCB regulations for that waste.” Section 761.50(b)(3)(iii) states that “the owner or operator of a site containing PCB remediation waste has the burden of proving the date that the waste was placed in a land disposal facility, spilled, or otherwise released into the environment, and the concentration of the spill.”

Your determination regarding the applicability of TSCA authority in this matter is that the PCBs were disposed, spilled or otherwise discharged onto the soils at the Delaware Riverfront Parcels prior to April 18, 1978 and that the PCB remediation waste is not required to be cleaned up in accordance with the regulations set forth at 40 C.F.R. §761.61.

*Printed on 100% recycled/recyclable paper with 100% post-consumer fiber and process chlorine free.
Customer Service Hotline: 1-800-438-2474*

EPA has conducted a review of the information provided that pertains to the PCB remediation waste that has been identified and documented as existing at the Delaware Riverfront Parcels. The information provided was aerial photographs and soil sampling results for PCBs gathered over the last thirty years. Based upon this supporting information, EPA concurs with your assessment that a cleanup, in accordance with 40 C.F.R. §761.61, of the PCB remediation waste located at the Delaware Riverfront Parcels is not required because the PCBs were disposed, spilled or otherwise discharged prior to April 18, 1978.

Any questions concerning this matter should be directed to Ms. Kelly Bunker, PCB Coordinator at (215) 814-2177 or bunker.kelly@epa.gov.

Sincerely

A handwritten signature in black ink, appearing to read "John A. Armistead". The signature is written in a cursive style with a large, prominent initial "J".

City of Philadelphia, Philadelphia County, Pennsylvania

Dear Ms. Rainford and Ms. Flannery:

Pursuant with the February 22, 2019 Public Involvement Plan (PIP) for the above-referenced properties, a public meeting was held at Oxford Mills the evening of April 15, 2019. Notice of the public meeting was published in *The Philadelphia Daily News* on March 15, 2019. Documents regarding the properties were made available for public review in advance of the meeting at the Fishtown Community Library.

Representatives of the property owners and Concordia, a prospective purchaser of one of the three parcels, participated in the meeting by providing information and answering questions from those in attendance. Information presented included the results of the soil sampling that has been conducted on all three parcels. Questions from the attendees related to the environmental condition of the properties, plans for future remediation and site development, and dust control measures that will be implemented as the work progresses. The list of attendees is attached along with materials that were presented at the meeting. No additional questions regarding the properties have been received. As new reports are generated, they will be added to the library repository and notices of their availability will be provided to the public.

Should you have any questions regarding this information, please do not hesitate to contact me.

Sincerely,
PENN ENVIRONMENTAL & REMEDIATION, INC.

Dear Dr. Farley:

On behalf of Dyott Corporation/Columbus Boulevard Associates, LP (Remediator), RT Environmental Services, Inc. continues to take the appropriate steps to inform the public about the remedial work that will take place at the above referenced site.

An updated copy of the Remedial Investigation Report (RIR)/Cleanup Plan has been made available for public review on the RT Environmental Services, Inc. website at www.rtenv.com under Resources.

A notice of this report posting will be published in the Philadelphia Inquirer Newspaper on March 8th. The notice indicates that public comments may be submitted in writing within the next thirty (30) days to RT Environmental Services, Inc., 215 W. Church Road, King of Prussia, PA 19406, Attention: Mr. Craig Herr or via email to: cherr@rtenv.com by April 8, 2021.

Please feel free to contact me if you have any questions at 610-265-1510 ext. 215.

Sincerely,

RT ENVIRONMENTAL SERVICES, INC.

Craig Herr, PG
Senior Consultant

Re: 2005 Richmond Street
Former Cramp Ship Yard – Parcel C
City of Philadelphia, Philadelphia County

Dear Ms. Rainford:

The Land Recycling and Environmental Remediation Standards Act (“Act 2”) requires that a Notice of Intent to Remediate (“NIR”) be provided to the municipality in which the site is located. Act 2 also provides that when a site is being remediated to a Site-Specific Standard, the municipality is afforded a 30-day comment period. In accordance with the provisions of the Act, we are formally notifying you of Columbus Blvd. Associate’s intent to remediate soils at the subject site. A copy of the NIR, which will be sent to the Department of Environmental Protection (DEP), is enclosed. This notice will be published in the *Pennsylvania Bulletin* and a summary of the notice will appear in a local newspaper.

Publication of this notice in a local newspaper initiates the 30-day public and municipal comment period. During this time, your municipality may request to become involved in the development of the remediation and reuse plans for the site. If the municipality wishes to become involved in this project, please send your comments to me.

Should you have any questions, please contact me.

Sincerely,

Darryl D. Borrelli
Technical Consultant

NOTICE

Pursuant to the Land Recycling and Environmental Remediation Standards Act, the act of May 10, 1995, P.L. 4, No. 1995-2, ("Act 2"), notice is hereby given that Columbus Blvd. Associates has submitted to the Pennsylvania Department of Environmental Protection ("DEP") a Notice of Intent to Remediate ("NIR") a site located at 2005 Richmond Street, City of Philadelphia, Philadelphia County. This NIR states that site was a portion of a former ship repair and maintenance operation. Site soils have been found to be impacted with VOCs, metals, PAHs and PCBs. Columbus Blvd. Associates has indicated that the proposed remediation measures are unknown but may include capping of impacted soils. The proposed future use is undetermined, but may include mixed uses. Columbus Blvd. Associates plans to use the statewide health and site-specific standards at the site. The Act provides for a 30-day public comment period for site-specific standard remediations. The 30-day comment period is initiated with the publication of this notice. Until January 23, 2019, the City of Philadelphia may submit a request to Columbus Blvd. Associates to be involved in the development of the remediation and reuse plans for the site. The City of Philadelphia may also submit a request to Columbus Blvd. Associates during this 30-day comment period to develop and implement a public involvement plan. Copies of these requests and of any comments should also be submitted to DEP, Southeast Regional Office, 2 East Main Street, Norristown, PA 19381.

Dear Mr. Hoogstraten:

This letter acknowledges receipt of your Notice of Intent to Remediate (NIR) on December 20, 2018, pertaining to the subject property and submitted in accordance with the Land Recycling and Environmental Remediation Standards Act (Act 2). The procedures set forth in Act 2 must be followed in order for this site to qualify for the liability protection provided by the Act. The Department of Environmental Protection (DEP) will not accept plans and reports until after the 30-day comment period following submission of the NIR ends.

The 30-day comment period following submission of the NIR allows the municipality the opportunity to request to be involved in the development of remediation and reuse plans for the property. If the municipality requests a public involvement plan, any comments and responses must be included in any subsequent Site-Specific Standard reports. Remedial investigation reports, risk assessment reports, cleanup plans, and final reports submitted to DEP under the site-specific standard need to be accompanied by the required fees and documentation verifying compliance with the public notification requirements.

Additional technical and program information can be found at www.dep.pa.gov (Business>Land>Land Recycling). Also, please refer to the Land Recycling checklists which are helpful in assuring reports are complete before submittal. DEP uses the checklists to perform administrative and technical completeness reviews when plans and/or reports are submitted. It is strongly encouraged to include the appropriate completed checklist with your Final Report submission. Land Recycling checklists can also be found at the website under 'Forms, Checklists & Notifications' link.

eFACTS Activity No. 52871
2001 Richmond Street
City of Philadelphia
Philadelphia County

Dear Mr. Hoogstraten:

This letter acknowledges receipt of your Notice of Intent to Remediate (NIR) on January 7, 2019, pertaining to the subject property and submitted in accordance with the Land Recycling and Environmental Remediation Standards Act (Act 2). The procedures set forth in Act 2 must be followed in order for this site to qualify for the liability protection provided by the Act. The Department of Environmental Protection (DEP) will not accept plans and reports until after the 30-day comment period following submission of the NIR ends.

The 30-day comment period following submission of the NIR allows the municipality the opportunity to request to be involved in the development of remediation and reuse plans for the property. If the municipality requests a public involvement plan, any comments and responses must be included in any subsequent Site-Specific Standard reports. Remedial investigation reports, risk assessment reports, cleanup plans, and final reports submitted to DEP under the site-specific standard need to be accompanied by the required fees and documentation verifying compliance with the public notification requirements.

Additional technical and program information can be found at www.dep.pa.gov (Business>Land>Land Recycling). Also, please refer to the Land Recycling checklists which are helpful in assuring reports are complete before submittal. DEP uses the checklists to perform administrative and technical completeness reviews when plans and/or reports are submitted. It is strongly encouraged to include the appropriate completed checklist with your Final Report submission. Land Recycling checklists can also be found at the website under 'Forms, Checklists & Notifications' link.

Please refer to the Standard Attachment for considerations of other programs which may be applicable to this property.

Rebecca Flannery is the project officer assigned to your project and will be working with you towards the remediation of this property. Frequent contact is encouraged between your representatives and our staff. If you have any questions or need further clarifications of our procedures, please contact the project officer by email at rflannery@pa.gov or by telephone at 484.250.5779.

Sincerely,

C. David Brown, P.G.

CITY OF PHILADELPHIA

DEPARTMENT OF PUBLIC HEALTH
1101 Market Street, 13th Floor
Philadelphia, PA 19107

THOMAS A. FARLEY, MD, MPH
Health Commissioner

CAROLINE JOHNSON, MD
Acting Deputy Health Commissioner

January 15, 2019

Darryl D. Borrelli
Manko, Gold, Katcher, Fox LLP
401 City Avenue
Suite 901
Bala Cynwyd, PA 19004

Mr. Borrelli:

Recently, the City of Philadelphia Department of Public Health, Environmental Engineering Unit received a Notice of Intent to Remediate (NIR) from your firm, under the provisions of the Pennsylvania Land Recycling and Environmental Remediation Standards Act (Act 2) regarding the property located at **2001 Richmond Street**, Philadelphia, Pennsylvania (19125).

Through the Notice of Intent (NIR) provisions of Act 2, the City of Philadelphia hereby requests that you develop a Public Involvement Plan (PIP) for this site. This request is made in accordance with the internal procedures first developed by the City in 2003 for this purpose. These procedures recommend our municipality request a PIP if the project is in close proximity or adjacent to residential, educational (schools/daycare), medical, religious, recreational and park properties. Since this property is in close proximity to residential properties, we are obligated to request a PIP. In addition to the reason above, members of the interdepartmental review team which reviews NIRs submitted to the City have recommended a PIP in this instance.

The venue for this PIP will be an appropriately publicized meeting of interested parties (impacted community and businesses) you will host to discuss this site, to be held at a suitable location and time, allowing interested parties to attend. An approximate 30 days advance notice of the meeting must be provided, during which time all relevant sampling and background investigation material should be made available for public inspection at a suitable location, such as the nearest school or public library.

The meeting would focus on the following:

- Identity, location and concentration of contaminants and hazardous substances found in sampling events at the site;

- Any potential health effects of those contaminants, based on locations and concentrations noted;
- Measures to be taken to protect the community, workers and recreation areas from possible exposure;
- Further definition of the remediation methodology to be employed;
- Discussion of specific procedures, such as dust control, sedimentation and erosion control.

Following the meeting, all supplemental material, which will include presentation materials, attendance list, and questions and answers will append the material provided earlier, which will be given to PA DEP, with a copy to the City.

Please notify the Department of Public Health in writing of the date, time and location of the public meeting, and the location of the document depository as noted above.

Please note that this PIP request has nothing to do with the perceived value and need of this development for the community and the City. We assume that you have already had several meetings with the community, elected officials and others on the benefits of this development. This PIP request is specifically concerned with final questions regarding the proposed remediation to be employed on the site in its current condition. Accordingly, your presentation can be geared specifically to the remediation strategy, and the questions noted above.

Should you have any questions, please contact Leigh Anne Rainford of our Department's Environmental Engineering section at 215-685-7342 or at Leighanne.Rainford@Phila.gov.

Sincerely,

Caroline Johnson, MD
Deputy Health Commissioner

Re: Statewide Health Standard Final Report Approval
Former Cramp Shipyard
eFACTS PF No. 713595
eFACTS Activity No. 38337
2001 Richmond Street, 2005 Richmond Street and 2001 Beach Street
City of Philadelphia
Philadelphia County

Dear Mr. Anderson:

The Department of Environmental Protection (DEP) reviewed the documents titled "Final Report Addendum" and "Final Report Addendum Supplement," (report) for the property referenced above. The reports were prepared by RT Environmental and submitted to DEP in accordance with the Land Recycling and Environmental Remediation Standards Act (Act 2), and they constitute a final report as defined in Chapter 3 of Act 2.

DEP hereby approves this final report for the substances identified and remediated to an Act 2 standard within the site(s) specified. Chapter 5, Section 501 of Act 2, provides the liability protection where attainment of Act 2 cleanup standards is demonstrated. The cleanup liability protection provided by this chapter applies to the current and future owner or any other person who participated in the remediation; a person who develops or occupies the property; successor or assign of any person to whom liability protection applies; and a public utility to the extent the public utility performs activities on the identified property(ies).

This project attained a nonuse aquifer residential Statewide health standard in groundwater for those contaminants in the enclosed list that were demonstrated to have been released at the site.

The Uniform Environmental Covenants Act (Act 68 of 2007), Title 27, Pa.C.S. Chapter 65 (UECA) and accompanying regulations provide a standardized process for creating, documenting, and assuring the enforceability of activity and use limitations on contaminated properties involving most engineering and institutional controls used to achieve Act 2 standards. Since the report utilizes activity and use limitations or will have post remedial care

obligations to meet and/or attain the nonuse aquifer standard, an environmental covenant is required to be submitted within 30 days of the date of this approval letter.

Please refer to the enclosed Standard Attachment for other DEP program requirements for considerations which may be applicable to the referenced site.

Any person aggrieved by this action may appeal the action to the Environmental Hearing Board (Board), pursuant to Section 4 of the Environmental Hearing Board Act, 35 P.S. § 7514, and the Administrative Agency Law, 2 Pa.C.S. Chapter 5A. The Board's address is:

Environmental Hearing Board
Rachel Carson State Office Building, Second Floor
400 Market Street
P.O. Box 8457
Harrisburg, PA 17105-8457

TDD users may contact the Environmental Hearing Board through the Pennsylvania Relay Service, 800.654.5984.

Appeals must be filed with the Board within 30 days of receipt of notice of this action unless the appropriate statute provides a different time. This paragraph does not, in and of itself, create any right of appeal beyond that permitted by applicable statutes and decisional law.

A Notice of Appeal form and the Board's rules of practice and procedure may be obtained online at <http://ehb.courtapps.com> or by contacting the Secretary to the Board at 717.787.3483. The Notice of Appeal form and the Board's rules are also available in braille and on audiotape from the Secretary to the Board.

IMPORTANT LEGAL RIGHTS ARE AT STAKE. YOU SHOULD SHOW THIS DOCUMENT TO A LAWYER AT ONCE. IF YOU CANNOT AFFORD A LAWYER, YOU MAY QUALIFY FOR FREE PRO BONO REPRESENTATION. CALL THE SECRETARY TO THE BOARD AT 717.787.3483 FOR MORE INFORMATION. YOU DO NOT NEED A LAWYER TO FILE A NOTICE OF APPEAL WITH THE BOARD.

IF YOU WANT TO CHALLENGE THIS ACTION, YOUR APPEAL MUST BE FILED WITH AND RECEIVED BY THE BOARD WITHIN 30 DAYS OF RECEIPT OF NOTICE OF THIS ACTION.

Mr. James Anderson

Dear Mr. Anderson:

This letter acknowledges receipt of your Final Report on August 3, 2018, pertaining to the subject property and submitted in accordance with the Land Recycling and Environmental Remediation Standards Act (Act 2). This Notice of Intent to Remediate submitted previously and this Final Report indicate that you sought to remediate this site to meet the statewide health standard.

Act 2 requires the Department of Environmental Protection (DEP) to review and respond to your final report within 60 days of the receipt date. You will receive a letter advising you of DEP's action on your final report submission. If you have any questions or need further clarification of our procedures, please call Rebecca Flannery at rflannery@pa.gov or by telephone at 484.250.5779.

Sincerely,
